## Introduction

The Veterans Affairs Greater Los Angeles Healthcare System (VAGLAHS) is among the largest and most complex VA medical centers in the nation. It provides a full spectrum of acute and long term inpatient and ambulatory care to approximately 1.4 million veterans residing in the primary service area of Los Angeles, Ventura, and Kern Counties, covering 20,000 square miles. The VAGLAHS consists of one tertiary care facility, two ambulatory care centers, and nine community based outpatient clinics. VAGLAHS is affiliated with both UCLA School of Medicine and USC School of Medicine, as well as more than 45 colleges, universities, and vocational schools in 17 different health care related programs.

The *West Los Angeles Healthcare Center* is a tertiary care teaching facility dedicated to providing a wide array of acute and ambulatory patient care services to our nation's veterans. The comprehensive diagnostic and treatment services provided include a broad range of medical, surgical, and psychiatric care. Internal medicine subspecialties include cardiology, infectious diseases, gastroenterology, allergy, pulmonology, nephrology, endocrinology, rheumatology, and hematology/oncology. Major

## General Information

The VAGLAHS offers PGY2 specialty residency programs in the area of Neurology and Cardiology.

The **PGY2 Pharmacy Residency in Neurology** is one of the only neurology residencies offered in the nation and is currently the first and only ASHP accredited Neurology Residency. It is a twelve-month long program that provides a very diverse experience in both the acute care and ambulatory care settings. Training is primarily conducted at the West Los Angeles Healthcare Center.

The residency provides a solid foundation in the areas of stroke and epilepsy, but also offers clinical experiences in movement disorders, dementia/neurobehavior, and general neurologic disorders such as headache and neuropathy. Interested residents also have the option of integrating neurosurgery experiences into the training year. Residents are offered the ability to tailor the program to meet their interests in the field of neurology.

surgical subspecialties include orthopedics, urology, neurosurgery, ophthalmology, plastics, ENT, podiatry, and cardiothoracic surgery. In addition to the main acute care hospital, there is a 180-bed Nursing Home, a Hospice Unit, Home-Based Primary Care, and a newly built 300+ bed State Home.

The *Sepulveda Ambulatory Care Center & Nursing Home* offers a state-of-the-art ambulatory care facility. The center has specialty outpatient programs in spinal cord injury, stroke rehabilitation, women's health, preventative medicine, dentistry, mental health, and chemical dependency. Extended care activities include a 120-bed Academic Nursing Home and a Home-Based Primary Care Program. The facility hosts extensive clinical and basic science research, including Geriatric Research Education and Clinical Center (GRECC) and Field Program for Health Science Research and Development (HSR&D). The HSR&D program evaluates provider practice and patient outcome studies in the delivery of ambulatory health care.

The *Los Angeles Ambulatory Care Center* is located in the heart of Downtown Los Angeles. It serves as a centrally located facility for the diverse veteran population of the city of Los Angeles, focusing on primary care and mental health services. The clinic provides special services in post-traumatic stress disorder, day treatment, and mental health services.

Residents will be involved in teaching, with possible appointment as Adjunct Assistant Professor at the USC School of Pharmacy. Residents will also be involved in research.

The **PGY2 Pharmacy Residency in Cardiology** is a twelve-month long joint program funded by Western University of Health Sciences. Depending upon the interest of the candidate, the program is also offered as a two-year fellowship. Residents/fellows will obtain clinical experiences at the VAGLAHS in both the acute care and ambulatory care settings. Training is conducted at the West Los Angeles Healthcare Center and Western University.

Residents/fellows will be involved in academia, obtaining faculty status at the WU College of Pharmacy. Residents/fellows will also be involved in research, with a heavier emphasis in the fellowship track.

Candidates interested in the Cardiology residency/fellowship would apply through Western University.

# PGY2 Pharmacy Residency in Neurology

## Program Description

This specialty residency provides a comprehensive experience in contemporary neurology pharmacy practice. The resident will practice clinical pharmacy in neurology and neurosurgical patients in an acute setting and in the ambulatory Neurology clinics. Experiences in Epilepsy, Stroke, Movement Disorders, Headache, General Neurology, and Neurobehavior Disorders are included. Neurology preceptors include skilled physician providers, neurology pharmacists, and research faculty members with extensive experience in this specialty, as well as in research and academia. Teaching opportunities include

didactic and small group facilitations, as well as precepting pharmacy students and PGY1 pharmacy practice residents. Clinical and laboratory based research opportunities are available.

Research project is required for successful completion of this program. The resident will be given the opportunity to develop a neurology-related research question based on their experience.

## Practice Experience

### West Los Angeles Healthcare Center (WLA):

Primary Preceptor: *Sunita Dergalust Pharm.D., BCPS*

### Inpatient Experiences

- **Acute Care Neurology:** The resident will be responsible for reviewing and monitoring drug therapy and antimicrobial, heparin, and anti-epileptic drug pharmacokinetic dosing consults to physicians and allied healthcare professionals. Residents will serve as the drug therapy specialist, as well as a pharmacy educator on the team. Residents will provide education to patients on management of risk factors for secondary stroke prevention. They will actively participate in interdisciplinary team meetings and medical rounds. The medical team consists of Board Certified Neurologist attendings, UCLA Neurology fellows, UCLA Neurology residents, UCLA Psychiatry interns, and a clinical pharmacist.
- **Epilepsy Monitoring Unit:** This is a specialized unit that was developed as part of the Epilepsy Center of Excellence use to properly identify seizure localization and subsequently surgical candidates. The resident will work closely with the Neurology fellow and will be responsible for obtaining a detailed admission history and medication history for long term video EEG monitoring. Residents will actively participate in assessing/planning safe drug titration on and off AEDs.
- **Acute Care Neurosurgery:** The resident will be responsible for reviewing and monitoring drug therapy and antimicrobial and anti-epileptic drug pharmacokinetic dosing consults to physicians and allied healthcare professionals. Residents will serve as the drug therapy specialist, as well as a pharmacy educator on the team. They will actively participate in interdisciplinary team meetings and neurosurgical rounds. The medical team consists of UCLA Neurosurgery attendings, UCLA Neurosurgery residents and Surgery interns, and a clinical pharmacist.

### Ambulatory Care Experiences

- **Stroke Clinic:** In this clinic, residents will have the opportunity to assess/initiate/adjust medication regimens under the supervision of clinical pharmacists and attending physicians. Resident responsibilities in the clinic also include: interviewing patients prior to seeing their provider, reviewing medication profiles for drug interactions, appropriate dosing, therapy duplication, possible medication-induced side effects, and assessing compliance and barriers to compliance.
- **Seizure Clinic:** In this one half-day clinic, residents will have opportunities to assess/initiate/adjust AEDs under the supervision of clinical pharmacist and attending physicians. In addition to having the same general responsibilities as those identified for the Stroke Clinic, residents, will assure a comprehensive AED history is obtained, as well as appropriately monitor seizure response.
- **Headache Clinic:** In this clinic, residents will have the opportunity to assess/initiate/adjust medication regimens under the supervision of clinical pharmacists and attending physicians. In addition to having the same general responsibilities as those identified for Stroke Clinic, residents will also educate patients regarding signs and symptoms of headache, as well as triggers.
- **Dementia/Neurobehavior Clinic:** In this one half-day clinic, residents will have the opportunity to conduct an in-depth review of medication profiles, evaluating all medications and their potential to contribute to memory disorders. Residents will also be involved in telephone titration of dementia medications.
- **Movement Disorder Clinic:** In this one half-day clinic, residents will have the opportunity to provide detailed counseling on medications to patients diagnosed with various movement disorders such as Parkinson's, ataxia, and tremor.
- **General Neurology Clinic:** In this two half-day clinic, residents will have the opportunity to provide detailed counseling on medications to patients diagnosed with general neurologic disorders, particularly headache and neuropathy.

# PGY2 Pharmacy Residency in Ambulatory Care

## Program Description

This specialty residency offers a comprehensive experience in ambulatory care with a focus in the providing care to the underserved. VAGLA's HPACT program is a nationally designated Homeless PACT (Patient Aligned Care Team), focused on delivering "whole health care." Established in July 2014, HPACT's four interprofessional teams are among the country's most highly concentrated groups of integrated mental health and primary care teams.

VAGLA is one of seven VA facilities designated as a Center of Excellence in Primary Care Education and has established an Interprofessional Academic PACT within our HPACT program (IA HPACT). The IA HPACT was created as a learning lab to promote the transformation of VA into interprofessional learning experiences to prepare trainees to practice, lead, and thrive in team-based health-systems.

The resident will participate in HPACT activities as integral members of the interprofessional team approximately seven

half-days per week. An equivalent of approximately one day per week will be devoted to experiences in select subspecialty clinics, in blocks of six to twelve weeks, depending upon the rotation and the interest of the resident.

Ambulatory care preceptors include skilled physician providers, ambulatory care pharmacists, and research faculty members experienced in their respective specialty, as well as in research and academia. Teaching opportunities include didactic and small group facilitations, as well as precepting various levels of pharmacy trainees.

Research project is required for successful completion of this program. The resident will be given the opportunity to develop an ambulatory care-related research question based on their experience.

## Practice Experience

### West Los Angeles Healthcare Center (WLA):

Primary Preceptors: *Shinobu Seragaki, Pharm.D., varies depending upon specialty clinic*

### HPACT Experience

- **Monday/Thursday:** The resident will be involved with providing clinical pharmacy services to HPACT patients on the IA HPACT team with trainees from other disciplines (Primary Care Internal Medicine and Psychiatry Residents, as well as Nurse Practitioner, Psychology, and Social Work Fellows). The resident will also participate in morning team huddles, patient-team huddles for complex patients, team meetings, continuous quality improvement and workflow meetings, and learning seminars. Program learning goals emphasize complex care of homeless Veterans and interprofessional (IP) team collaboration. The curriculum will address IP competencies in five domains: complex care of homeless Veterans, IP collaboration; sustained relationships; shared decision making; performance improvement. This component of the residency is longitudinal.
- **Two Days per Week:** The resident will be involved with providing clinical pharmacy services to HPACT patients on the remaining HPACT teams. Responsibilities include medication therapy management of patients referred to pharmacy for chronic diseases such as diabetes, hypertension, and dyslipidemia as well as prescription processing, medication counseling, provision of drug information, patient/provider education. Residents may also be involved as a provider in shared medical appointments (SMA) and mobile medical units, as well as innovation and implementation of new services. This component of the residency is longitudinal.

### Speciality Experiences

- **One Day per Week:** The resident will practice in various subspecialty clinics, in blocks of six to twelve weeks throughout the year, depending upon the rotation and the interest of the resident. This may include experiences in specialties such as anticoagulation, women's health, anemia, hepatitis C, smoking cessation, neurology, geriatrics, infectious disease, and cardiology. Depending upon the practice of pharmacy within each of the specialized clinics, responsibilities may include activities such as medication therapy management of patients referred to pharmacy, clinical video telehealth (CVT), electronic consults (e-consults), SMAs, and patient education.

WESTERN UNIVERSITY OF HEALTH SCIENCES

# Pharmacy Fellowship in Cardiology

## Program Description

Western University of Health Sciences is an institution with a focus in graduate-level education of health science professionals. Founded in 1977, the university is a small, private, health-focused institution that fosters interprofessional learning. The university is committed to preparing graduates, in a learner-centered academic and professional environment, who will serve the health care needs of society for today and for the future.

The PGY2 Pharmacy Residency/Fellowship Program in Cardiology is a joint program between Western University of Health Sciences and the VA Greater Los Angeles Healthcare System (VAGLAHS). It is available as a 12-month PGY2 non-degree residency program or 2-year fellowship in cardiovascular pharmacy, depending upon the interests of the

trainee. Since this is a two-campus program involving Western University and VA West Los Angeles Healthcare Center, residents are required to rotate at both sites, depending on required activities.

The program offers a well-balanced clinical experience between ambulatory care and acute care cardiology. Experiential and didactic teaching, as well as research activities, completes the program. The program is divided into monthly rotations and provides residents with clinical insights and practical experiences in cardiology practice, teaching, and research

## Practice Experience

### Inpatient Experiences

- **Acute Care Cardiology:** During the rotation, the resident will be responsible for reviewing and monitoring drug therapy for the purposes of identifying, preventing and resolving drug-related problems with the patient and the healthcare team. Residents will serve as the drug therapy specialist as well as a pharmacy educator on the team, actively participating in interdisciplinary team meetings and medical rounds. The medical team includes Board Certified Attending Cardiologists, Cardiology fellows, medical residents, and a pharmacist.
- **Consults and Procedures:** The resident will have the opportunity to participate in the cardiology consult service, gaining an appreciation for treating patients with heart disease who are not admitted directly to the inpatient cardiology service. In addition, the resident will have the opportunity to observe various cardiac procedures, including, cardiac angiograms, percutaneous coronary interventions, echocardiograms, electrophysiological procedures, and stress tests.

## Program Requirements

### Teaching Responsibilities

Residents will be required to participate in didactic teaching and assessment within the Western University PharmD curriculum, precept Western U pharmacy students during their rotations, and conduct multidisciplinary presentations to the cardiology healthcare team.

### Ambulatory Care Experiences

- **Cardiomyopathy Clinic and Risk Reduction Clinic:** In these two multidisciplinary clinics, the resident will have opportunities to conduct medication interviews, assess cardiovascular therapy regimens, educate patients and providers, and act as the drug therapy specialist under attending pharmacist/physician supervision. Resident responsibilities in the clinics include reviewing medication profiles for drug interactions, appropriate dosing, therapy duplication, possible medication-induced side effects, and assessing adherence and barriers to adherence.
- **Anticoagulation Clinic:** In this pharmacist-managed clinic, the resident will be responsible for assessing/adjusting medication regimens, ordering and following up on laboratory tests results under clinical pharmacist supervision. Resident responsibilities in the clinic also include: reviewing medication profiles for drug interactions, appropriate dosing, therapy duplication, possible medication-induced side effects, and assessing adherence and barriers to adherence.

### Research Project

Residents are required to complete a cardiovascular-oriented research project suitable for presentation and publication. Residents are also required to participate in other ongoing research with the program director.
