VA Sepulveda Ambulatory Care Center
Doctoral Internship Program in
Health Service Psychology

VA Sepulveda Ambulatory Care Center
Alexis D. Kulick, Ph.D., ABPP/CN
Director of Psychology Training
Psychology Department (116B)
16111 Plummer Street
North Hills, CA.  91343-2036
818-891-7711, extension 32734
https://www.losangeles.va.gov/trainee/

APPIC MATCH Number:  116312
Applications due: November 1, 2020

Welcome to the VA Sepulveda Ambulatory Care Center! We are pleased you will be considering our doctoral internship site. We hope you find the following information helpful as you make your decision. If you have any questions, please feel free to contact us.

Accreditation Status:
The Doctoral Internship at the VA Sepulveda Ambulatory Care Center (SACC) is accredited by the Commission on Accreditation (CoA) of the American Psychological Association (APA). The next site visit will be during the academic year 2023.

Application and Selection Procedures:
Applications for full-time internship positions in psychology will be accepted from students who are are in good standing at an American Psychological Association (APA) or Canadian Psychological Association (CPA) accredited graduate program in Clinical, Counseling, or Combined psychology or at a Psychological Clinical Science Accreditation System (PCSAS) accredited program in Clinical Science. Students with a doctorate in another area of psychology who meet the APA or CPA criteria for re-specialization training in Clinical, Counseling, or Combined Psychology are also eligible. The training program is funded to support SIX full-time internship positions. The 2021-2022 internship year will begin on August 2, 2021.

Applications must be submitted through the AAPI Online portal by 11:59 p.m. Eastern Time (8:59 p.m. Pacific Time) on November 1, 2020.

To apply for internship at the VA Sepulveda Ambulatory Care Center, please include the following information in your cover letter:

- List at least three of your rotations of interest in descending order of priority (1=most interested)
- List all elective experiences of interest

SACC does not require any supplemental application materials. Please submit three letters of recommendation; at least two letter writers should be from clinical supervisors.
Please contact the Director of Training if you have any questions:
Alexis Kulick, Ph.D., ABPP/CN
Telephone: 818-891-7711, extension 32734
Email: alexis.kulick@va.gov
INTERNSHIP ADMISSIONS, SUPPORT, AND INITIAL PLACEMENT DATA

Internship Program Tables

Date Program Tables are Updated: 7/14/2020

**Internship Program Admissions:**
Briefly describe in narrative form important information to assist potential applicants in assessing their likely fit with your program. This description must be consistent with the program’s policies on intern selection and practicum and academic preparation requirements

**Eligibility:**
Minimum qualifications include U.S. citizenship, enrollment and good standing in an American Psychological Association (APA) or Canadian Psychological Association (CPA) accredited graduate program in Clinical, Counseling, or Combined psychology or at a Psychological Clinical Science Accreditation System (PCSAS) accredited program in Clinical Science. Students with a doctorate in another area of psychology who meet the APA or CPA criteria for re-specialization training in Clinical, Counseling, or Combined Psychology are also eligible. Approval for internship status by your graduate program training director is also required. Other VA-wide eligibility requirements include:

1. U.S. citizenship. VA is unable to consider applications from anyone who is not currently a U.S. citizen. Verification of citizenship is required following selection. All interns and fellows must complete a Certification of Citizenship in the United States prior to beginning VA training.
2. A male applicant born after 12/31/1959 must have registered for the draft by age 26 to be eligible for any US government employment, including selection as a paid VA trainee. Male applicants must sign a pre-appointment Certification Statement for Selective Service Registration before they can be processed into a training program.
3. Interns and Postdoctoral Residents are subject to fingerprinting and background checks. Match result and selection decisions are contingent on passing these screens.
4. VA conducts drug screening exams on randomly selected personnel as well as new employees. Interns and Fellows are not required to be tested prior to beginning work, but once on staff, they are subject to random selection for testing as are other employees.

For more information, please see: [http://www.psychologytraining.va.gov/eligibility.asp](http://www.psychologytraining.va.gov/eligibility.asp).

**Selection:**
The Sepulveda VA Doctoral Internship training program is funded to support **SIX** full-time general internship positions. Interns are selected based on multiple factors; these include the quality of their graduate and undergraduate education, the quality and diversity of practicum experiences, research and teaching experience, multicultural competence, letters of recommendation, and perhaps most importantly, the perceived fit between the student and our training program. We seek applicants who have had a variety of clinical experiences with an emphasis on evidence-based therapy modalities with different adult patient populations. We require that at the time of the application process, applicants have accrued at least 400 intervention hours and 80 assessment hours. We require that applicants have passed their comprehensive exams and have had their dissertation proposal approved by the start of
internship. We prefer that applicants have completed or have made significant progress on their dissertations before starting the internship.

Our training program is committed to creating a supportive learning environment for individuals of diverse backgrounds, and as a federal agency, we abide by the U.S. Government Equal Employment Opportunity (EEO) and Reasonable Accommodation policies. The Internship Program follows a policy of selecting the most qualified candidates and is an Equal Opportunity Employer. Our commitment to diversity includes attempting to ensure an appropriate representation of individuals along many dimensions, including (but not limited to) gender, sexual orientation, age, ethnic/racial minorities, and persons with disabilities. Our internship program values cultural and individual diversity, and we strongly encourage qualified candidates from all backgrounds to apply.

The Internship program typically receives over 130 applications each year for the six internship positions. Applications are reviewed by members of the training committee to determine whether an interview should be granted. Applicants selected for interviews previously had been invited to attend any one of four Open House/Interview sessions held in early and mid January. These four-to-five-hour sessions included: a group introduction to the staff and program, a campus tour, a meeting with the current interns over lunch (provided), and two individual interviews with staff psychologists who were selected based on applicants’ rotation preferences and stated training interests.

While in-person interviews had previously been preferred, given the consequences of the COVID-19 pandemic, interviews will likely be held remotely using video technology on four days in January (1/5, 1/8, 1/12, and 1/15/2021). The interviews will include a group introduction to the supervisors and to the training program, a slide show of the campus, buildings, and office space, a meeting with the current interns, and individual interviews with staff members selected based on applicants’ stated interests. It has always been our goal to make the interviews as comfortable as possible to provide an accurate representation of the collegial training environment at Sepulveda. All applicants will be notified of their interview status before December 15, 2020.

Our procedures for intern recruitment and selection are governed by the Department of Veterans Affairs, the American Psychological Association (APA), and the Association of Psychology Postdoctoral and Internship Centers (APPIC). This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept or use any ranking-related information from any intern applicant.

Our internship is accredited by the Commission on Accreditation of the American Psychological Association. Questions related to the program’s accreditation status should be directed to the Commission on Accreditation:

Office of Program Consultation and Accreditation
American Psychological Association

**Financial and Other Benefit Support for Upcoming Training Year***

Annual Stipend/Salary for Full-Time Interns: $29,817
Annual Stipend/Salary for Half-Time Interns: N/A

Program provides access to medical insurance for intern?  YES

If access to medical insurance is provided:

- Trainee contribution to cost required? YES
- Coverage of family member(s) available? YES
- Coverage of legally married partner available? YES
- Coverage of domestic partner available? NO

Hours of Annual Paid Personal Time Off (PTO and/or Vacation) 104  
-4 hours accrued every two weeks

Hours of Annual Paid Sick Leave 104  
-4 hours accrued every two weeks

In the event of medical conditions and/or family needs that require extended leave, does the program allow reasonable unpaid leave to interns/residents in excess of personal time off and sick leave?  YES

Other Benefits (please describe):

- Hours of Federal Holiday Leave 80
- Hours of Education Leave/Authorized Absence 40
Initial Post Internship Positions

Intern Cohort from 2017-2018 to 2019-2020

Note: “PD” = Post-doctoral residency position; “EP” = Employed Position. Each individual represented in this table should be counted only one time. For former trainees working in more than one setting, select the setting that represents their primary position.

Post-Internship Activities

Expanding upon the table above, over the last 8 internship classes, immediately following internship, 41 of our 45 graduating interns obtained postdoctoral fellowship positions (36 clinical, 5 research), and the remaining four obtained employment positions. All graduating interns successfully completed their dissertations and doctoral programs. Many continue to be actively engaged in scholarly activity, and all interns who are engaged in clinical service delivery have obtained licensure or plan to seek it. We feel confident that our Training Program prepares interns for a wide range of positions consistent with our program’s aim.

VA Greater Los Angeles Healthcare System Women’s Health Clinic Fellowship
San Diego VA, Center of Excellence for Stress and Mental Health (CESAMH)
PROGRAM SETTING:

VA Greater Los Angeles Healthcare System:
The VA Greater Los Angeles Healthcare System (VAGLAHS) is one of the largest healthcare systems within the Department of Veterans Affairs. It is one component of the VA Desert Pacific Healthcare Network (VISN 22) offering services to Veterans residing in Southern California and Southern Nevada. Greater Los Angeles (GLA) consists of two ambulatory care centers (Sepulveda VA and the Los Angeles Ambulatory Care Center); a tertiary care facility (West Los Angeles VA); and 8 community based outpatient clinics (CBOCs) throughout five counties in southern California (Los Angeles, Ventura, Kern, Santa Barbara, and San Luis Obispo). GLA provides comprehensive ambulatory and tertiary care to over 1.4 million Veterans living in this region.

GLA directs the Department of Veterans Affairs’ largest educational enterprise. It serves as a major training site for medical residencies sponsored by the UCLA David Geffen School of Medicine and USC School of Medicine, as well as more than 45 colleges, universities and vocational schools in 17 different medical, nursing, paramedical, and administrative programs. Over 500 university residents, interns, and students are trained at the VA Greater Los Angeles Healthcare System each year.

GLA is a designated Center of Innovation for the national Office of Patient Centered Care and Healthcare Transformation. This office works with VA leadership and health care providers to transform VA’s health system from the traditional medical model, which focuses on treating specific issues, to a personalized, proactive, patient-driven model that promotes whole health for Veterans and their families. Psychologists at GLA offer many integrated health and healing modalities of care, some of which include introductory courses for relaxation, mindfulness-based interventions, Tai Chi, yoga, and biofeedback. GLA has a Mindfulness Based Stress Reduction program (MBSR) for staff and Veterans.
Sepulveda Ambulatory Care Center:
The Sepulveda Ambulatory Care Center (SACC), located in the San Fernando Valley of Los Angeles, is part of the VA Greater Los Angeles Healthcare System. SACC is a fully independent, though integrated component of the educational mission of GLA. SACC is the major outpatient facility that provides care to the Veterans living in Northern Los Angeles. Following the earthquake in 1994, Sepulveda redefined its mission to become a comprehensive ambulatory care, education, and research facility. From an old-style traditional VA Medical Center, SACC has emerged as a facility in tune with contemporary and innovative health care delivery approaches and interprofessional collaboration. SACC offers a comprehensive array of services that supports the primary care program. These services include a wide spectrum of on-site ambulatory care activities for internal medicine, neurology, and specialty ambulatory surgery services, comprehensive psychiatry and psychology services, including alcohol and substance use treatment, dentistry, social services, rehabilitation medicine, audiology, speech pathology, prosthetics services, and comprehensive homeless services. There is also a 40-bed academic nursing home care unit on the campus.

SACC is recognized for special programs, including Geriatric Research, Education and Clinical Care Program (GRECC) and the Women's Health Program. SACC is unique for its expertise in primary, managed care education, and is a site for national VA PRIME medical residents and associated health trainees. Sepulveda's strong academic affiliation with UCLA Schools of Medicine, Dentistry and Nursing assures a progressive, high-quality healthcare environment. As a teaching facility, education and training are prominent at SACC. Most members of the medical staff hold clinical and/or academic appointments at UCLA or other academic institutions. Psychology is an independent discipline, but a fully integrated and respected component of the overall mental health and medical services.

SACC serves a diverse patient population. While the population is predominately male, we make every effort to ensure that the interns see a varied sample of patients. Efforts to reach out to women Veterans have resulted in an increased number of female patients and specialized women's clinics to address their unique needs. In fiscal year 2017, nearly 2800 female Veterans were seen for medical and/or mental
health treatment in the Women’s Health Clinic at Sepulveda. Creating a rotation in this service has allowed our interns to work with this traditionally under-represented population in VA Medical Centers.

The Psychology internship program at the Sepulveda VA has been accredited by the American Psychological Association since 1979. Of the 16 clinical psychologists on staff at Sepulveda, 15 provide clinical supervision in the internship training program (1 supervisor from the WLA VA supervises MBSR at Sepulveda). All psychologists on staff are licensed, are from APA-accredited doctoral programs in clinical or counseling psychology, have completed an APA-accredited doctoral internship, and most supervisors have completed postdoctoral residency programs. Many hold clinical and academic appointments at local institutions, including the University of California, Los Angeles and Pepperdine University. Psychologists at the Sepulveda VA engage in a variety of roles in interprofessional outpatient medical and mental health settings, with many staff members involved in program leadership positions.

In addition to the clinical internship, the Psychology training program provides training for up to 6 practicum students each year, most of whom are from local doctoral programs. In addition, we have two postdoctoral residency specialty areas – Trauma and Primary Care Mental Health Integration/Behavioral Medicine (PCMH/B-Med). There are also two other postdoctoral residency positions available to psychology trainees at Sepulveda which are not under the Psychology Department. Both the positions are two years long and are 75% research/25% clinical positions – one is in the Women’s Health Clinic, and the other is in the Geriatric Research Education and Clinical Center (GRECC). Interns will have the opportunity to work closely with practicum students and residents during the internship year.

**TRAINING AIMS, MODEL, AND PROGRAM PHILOSOPHY:**
The aim of the Sepulveda doctoral internship in health service psychology is to promote competencies necessary for postdoctoral or entry-level psychology positions in healthcare settings specializing in the assessment and treatment of patients with behavioral and mental health problems. The Internship is a generalist program based on the practitioner-scholar model. We provide a broad range of training opportunities and offer close supervision and competency-based training in a highly collegial setting. Our goal is to provide each intern with a breadth of training experiences in assessment, intervention, and consultation with a diverse selection of patients in medical and mental health settings.

The training model reflects our philosophy that psychological practice is based on the science of psychology which, in turn, is influenced by the professional practice of psychology. We expect that interns will acquire a broad range of clinical and consultation skills that are informed by the scientific literature. We emphasize training in Evidence-Based Therapy Modalities. Nearly all of our training supervisors are VA certified in one or more evidence-based practice modalities. Training opportunities exist in the following areas: Acceptance and Commitment Therapy (ACT); Biofeedback; Brief Behavioral Treatment for Insomnia (BBTi); Cognitive Behavioral Conjoint Therapy for PTSD (CBCT); Cognitive Behavioral Therapy (CBT) for anxiety, chronic pain, depression, insomnia, and substance use disorders; Cognitive Processing Therapy (CPT); Concurrent Treatment of PTSD and Substance Use Disorders Using Prolonged Exposure (COPE); Dialectical Behavior Therapy (DBT) skills; Exposure and Response Prevention (ERP); Imagery Rehearsal Therapy (IRT); Integrative Behavioral Couples Therapy (IBCT); Integrative Health and Healing modalities (IHH); Interpersonal Therapy (IPT); Mindfulness Based Relapse Prevention (MBRP); Mindfulness Based Stress Reduction (MBSR) and other Mindfulness approaches; Motivational Interviewing (MI); Problem Solving Therapy for Primary
Care; Prolonged Exposure (PE); Reminiscence Therapy; Skills Training in Affective and Interpersonal Regulation (STAIR), among others.

Interns at Sepulveda participate in six year-long training experiences/didactics (1. Clinical Research Seminar; 2. Diversity Seminar; 3. Trauma Seminar (only 6 months required); 4. Neuropsychology Seminar; 5. Psychology Training Seminar; and 6. Supervision Seminar) and three, 4-month rotations throughout the year from the following options: (1. Addictive Behaviors Clinic; 2. Health Psychology: Behavioral Medicine; 3. Health Psychology: Geriatrics; 4. Mental Health Clinic; 5. Primary Care Mental Health Integration; and 6. Women’s Health Clinic). We also offer three elective placements from which interns must choose at least two: (1. ACT Seminar [6 months or 12 months]; 2. Couples Seminar [12 months]; and 3. Insomnia Clinic [6 months or 12 months]). The schedule is designed so that, if desired, trainees can choose all three electives as long as ACT Seminar and Insomnia Clinic are done for six months each. If two electives are chosen and one or both of them are for six months, interns can apply 4 hours per week toward other training activities (described in greater detail later). Additionally, if trainees choose not to continue in Trauma Seminar beyond the first six months, five hours can be applied to the intern’s rotation or to another elective activity.

Staff at the Sepulveda VA believe in and respect the individuality of interns, honoring the diversity of their personal and professional background, skills, and interests. We recognize and appreciate the individual nature of their aspirations. The internship itself is structured to allow flexibility and to facilitate individualized training experiences. Supervision is developmentally sensitive with more intensive supervision at the beginning of the internship and at the start of each new clinical activity, with the goal of increasing the interns’ independence as their knowledge and skills develop over time. Supervision takes place through a variety of modalities, including: co-therapy in which the intern and supervisor work together, direct observation, audiotape review, review of written notes, and case report. By the completion of internship, our expectation is that interns will be well prepared to function at a sufficiently autonomous level required for a supervised entry-level position or a postdoctoral residency program.

**Internship Competencies:**
The APA Commission on Accreditation requires that all trainees in APA accredited programs develop specific competencies as part of their preparation for practice in health service psychology. Interns must demonstrate increasing competence in the following nine profession-wide competencies over the course of the year. The broad range of clinical and demographic diversity in our training setting provides an exceptional environment for developing these competencies.

1. **Research** – interns will demonstrate the substantially independent ability to critically evaluate and disseminate research or other scholarly activities (e.g., case conference, presentation, publications) at the local (including the host institution), regional, or national level.

2. **Ethical and legal standards** – interns will demonstrate knowledge of and act in accordance with each of the following: (i) the current version of the APA Ethical Principles of Psychologists and Code of Conduct; (ii) Relevant laws, regulations, rules, and policies governing health service psychology at the organizational, local, state, regional, and federal levels; and (iii) relevant professional standards and guidelines. Interns will recognize ethical dilemmas as they arise and apply ethical decision-making processes in order to resolve the dilemmas. Interns will conduct themselves in an ethical manner in all professional activities.
3. **Individual and cultural diversity** – interns will demonstrate understanding of how their own personal/cultural history, attitudes, and biases may affect their understanding and interaction with different people. Interns will demonstrate knowledge of the current theoretical and empirical knowledge base as it relates to addressing diversity in all professional activities including research, training, supervision/consultation, and service. Interns will integrate awareness and knowledge of individual and cultural differences in the conduct of professional roles (e.g., research, services, and other professional activities). Interns will apply a framework for working effectively with areas of individual and cultural diversity not previously encountered. Interns will learn to work effectively with individuals whose group membership, demographic characteristics, or worldviews create conflict with their own. They will demonstrate the ability to independently apply their knowledge and demonstrate effectiveness in working with the range of diverse individuals and groups encountered during residency, tailored to the learning needs and opportunities consistent with the program’s aim(s).

4. **Professional values and attitudes** – interns will behave in ways that reflect the values and attitudes of psychology, including integrity, deportment, professional identity, accountability, lifelong learning, and concern for the welfare of others. They will engage in self-reflection regarding their personal and professional functioning; engage in activities to maintain and improve performance, well-being, and professional effectiveness. Interns will be encouraged to actively seek and demonstrate openness and responsiveness to feedback and supervision. They will be expected to respond professionally in increasingly complex situations with a greater degree of independence as they progress across levels of training.

5. **Communication and interpersonal skills** – interns will develop and maintain effective relationships with a wide range of individuals, including colleagues, communities, organizations, supervisors, supervisees, and those receiving professional services. They will produce and comprehend oral, nonverbal, and written communications that are informative and well-integrated; demonstrate a thorough grasp of professional language and concepts. Interns will demonstrate effective interpersonal skills and the ability to manage difficult communication well

6. **Assessment** – interns will select and apply assessment methods that draw from the best available empirical literature and that reflect the science of measurement and psychometrics; collect relevant data using multiple sources and methods appropriate to the identified goals and questions of the assessment as well as relevant diversity characteristics of the service recipient. They will interpret assessment results, following current research and professional standards and guidelines, to inform case conceptualization, classification, and recommendations, while guarding against decision-making biases, distinguishing the aspects of assessment that are subjective from those that are objective. Interns will communicate orally and in written documents the findings and implications of the assessment in an accurate and effective manner sensitive to a range of audiences.

7. **Intervention** – Interns will establish and maintain effective relationships with the recipients of psychological services. They will develop evidence-based intervention plans specific to the service delivery goals. They will implement interventions informed by the current scientific literature, assessment findings, diversity characteristics, and contextual variables. Interns will demonstrate the ability to apply the relevant research literature to clinical decision making. They will be expected to modify and adapt evidence-based approaches effectively when a clear evidence-base is lacking. Interns will evaluate intervention effectiveness and adapt intervention goals and methods consistent with ongoing evaluation.

8. **Supervision** – interns will apply supervision knowledge in direct or simulated practice with psychology trainees, or other health professionals. Examples of direct or simulated practice
examples of supervision include, but are not limited to, role-played supervision with others, and peer supervision with other trainees.

9. **Consultation and interprofessional/interdisciplinary skills** – interns will demonstrate knowledge and respect for the roles and perspectives of other professions. They will apply this knowledge in direct or simulated consultation with individuals and their families, other health care professionals, interprofessional groups, or systems related to health and behavior.

Interns are formally evaluated on these nine areas of competence at the mid-year and end-of-year points for the year-long experiences, at the end of each 6-month elective, and at the end of each rotation, on a trimester basis. In addition to these general competencies, each rotation has specific goals and requirements, which will be communicated at the outset of the training experience.
Program Structure

The doctoral internship is structured to allow maximum flexibility and to facilitate individualized internship experiences. The interns are involved in 15 hours per week of clinical seminars and didactics and 12-14 hours per week in their clinical rotations. Interns have 8 hours per week to apply to elective activities. They must choose at least 2 electives in which to participate, but the schedule can accommodate all 3 electives, if desired. If 2 electives are chosen and one or both of them is for six months, interns can apply the remaining hours (4 hours/week) to a number of different training activities, such as adding time to their rotations, taking on additional assessments, taking on additional trauma patients, etc. Additionally, interns are required only to participate in the first six months of Trauma Seminar. Once the six months ends, they can either continue in the Trauma Seminar for the remaining six months or they can apply five hours/week to their rotation or to elective training activities. Three to five hours of unscheduled time is included in the schedule each week for administrative tasks and/or preparation time. Preferences of incoming interns are the primary factors in determining the schedule and training plan. Sepulveda's goal is to provide a successful and rewarding internship experience for all of our interns. The staff is highly committed to training, and we work to tailor the internship to meet each intern's individual interests, needs, and goals.

YEAR-LONG CLINICAL SEMINARS/DIDACTICS
Interns will be involved in six year-long clinical seminars/didactics, which require a time commitment of 15 hours per week. Required year-long experiences are as follows:

1. Clinical Research Seminar
2. Diversity Seminar
3. Neuropsychology Seminar
4. Psychology Training Seminar
5. Supervision Seminar
6. Trauma Seminar (only required for the first six months)

CLINICAL ROTATIONS:
The internship program also consists of three clinical rotations, which requires a time commitment of 12-14 hours per week for about four months each. For each rotation, interns are assigned a primary supervisor who will be working in that same setting. Currently, six clinical rotations are offered:

1. Addictive Behaviors Clinic (ABC)
2. Health Psychology: Behavioral Medicine (Health)
3. Health Psychology: Geriatrics (Gero)
4. Mental Health Clinic (MHC)
5. Primary Care Mental Health Integration (PCMHI)
6. Women’s Health Clinic (WHC)

ELECTIVES: (Choose 2 or 3 of these elective training experiences)
1. Acceptance and Commitment (ACT) Seminar (4 hours per week for 6 or 12 months)
2. Couples Seminar (4 hours per week for 12 months)
3. Insomnia Clinic (4 hours per week for 6 or 12 months)
As noted, if 2 electives are chosen and at least one of them is 6-months long, the remaining 4 hours/week can be applied to other available training activities.

In addition to the seminars and practica, there are numerous educational opportunities at Sepulveda. There are weekly colloquia in Geropsychology and Geriatrics, Grand Rounds in Medicine, and full-day workshops offered for GLA psychologists.

During the year, each intern will have the opportunity to present his/her work in a colloquium format for the psychology department. The presentations will include one presentation on the intern's research and one case presentation.

SUPERVISION:
Interns will have a number of different supervisors at any one time, but they will have three primary supervisors throughout the year, which is dictated by which rotation they are on. They will receive a minimum of four hours of supervision per week, at least two hours of which includes individual face-to-face supervision, one with the primary supervisor and the other with delegated supervisors. At least two hours per week will include group supervision with primary/delegated supervisors. The program employs a developmental model of training; there is more intensive supervision at the outset of the internship and at the beginning of each new rotation, with the goal of increasing the interns' independence and ability to manage increasingly complex situations as their knowledge and skills develop. Supervision takes place through a number of different modalities, including co-therapy, direct observation, audiotape review, case presentations, role plays/response to vignettes, review of written work, review of test data, observations in interdisciplinary team meetings, and feedback from other staff members. Interns have the opportunity to observe supervisors providing services in many settings, especially at the outset of the rotation, and frequently serve as co-facilitators for group interventions. If social distancing protocols due to the COVID-19 pandemic are still in effect at the time of training, all supervision will be conducted using remote methods, such as HIPAA-compliant web-based video platforms or telephone.

EVALUATION:
Interns are asked to complete a self assessment at the beginning of the training year and again at the midpoint. This is done to promote self reflection, to identify gaps in training, and to develop goals and a plan for the internship year. The Internship Program encourages ongoing feedback among interns, supervisors, and the Training Committee. Staff members review interns' progress at monthly staff meetings. Supervisors and interns complete formal, written, competency-based evaluations at the midpoint and end-point of the year-long experiences and at the end of each rotation and six-month elective with the expectation that feedback is an ongoing process throughout the year. These evaluations encourage communication, identify strengths and weaknesses, and set goals for training. Interns are required to complete evaluations of their supervisors, the rotations, the didactics, and their elective placements. The Training Program also solicits feedback from interns on programmatic issues informally throughout the year. Interns are scheduled to meet with the Director of Training on a monthly basis to discuss any problems, concerns, or suggestions for program improvement. Interns complete a formal program evaluation and an exit interview with the Director of Training at the completion of the year.
COVID-19 RESPONSE AND ADAPTATIONS:
Due to the COVID-19 pandemic, the training program has successfully transitioned all Psychology Trainees to full-time telework while maintaining almost all training activities without significant disruption. Specifically, all trainees are continuing to see veterans via telehealth for individual, couples, and group therapy, as well as cognitive assessment activities. Trainees attend and participate in didactics and supervision via virtual video platforms; they benefit from live, direct observation of clinical care by supervising psychologists. The health and safety of our Psychology Trainees, along with the competent care of our nation’s veterans, is of utmost importance to us. We will continue to provide high-quality training in professional psychology while simultaneously keeping our trainees’ health and wellness at the forefront.

REQUIREMENTS FOR COMPLETION

In order to maintain good standing in the program, interns must:

1. Abide by the APA Ethical Principles and Code of Conduct and all VA policies, rules, and regulations
2. Obtain ratings of 3 (“requires close supervision on advanced tasks") or higher on 80% of items in each of the nine core competency areas, with no serious ethical violations at the mid-point of the year.
3. Meet all administrative requirements

Criteria for Successful completion of internship:

1. Completion of 2080 hours of supervised professional experience, to be completed in one year of full-time training
2. It is required that a minimum of 25% of the intern’s worked hours be in direct patient care (10 hours of face-to-face care in a 40 hour/week)
3. Satisfactory performance in all nine clinical competency areas. It is expected that as interns gain in knowledge and skill during the internship year, they will be able to carry out more advanced tasks with greater independence. Successful completion of internship is determined by ratings of '4' (“Ready for Entry-Level Practice”) or higher on 100% of items in all nine clinical competency areas, with no areas requiring remediation and no serious ethical violations.
4. Didactic Training. Interns are required to attend required Psychology Seminars and Psychology Department workshops. In addition, interns must attend educational activities required on their rotations.
YEAR-LONG SEMINARS/DIDACTICS

* If social distancing protocols due to the COVID-19 pandemic are still in place at the time of training, seminars will be offered using a virtual platform.

**CLINICAL RESEARCH SEMINAR**
This is a monthly, 60-minute seminar attended by interns. Content focuses on developing a knowledge base for the use of research in clinical practice. Specific topics include: quality improvement, understanding and using clinical trials to inform practice, discussion of diversity, equity and inclusion in clinical research, and understanding how clinical practice guidelines are developed from research findings.

Coordinator:
Jennifer Martin, Ph.D., FAASM, DBSM

**DIVERSITY SEMINAR**
This is a twice-monthly, 60-minute seminar attended by interns and residents. The purpose of this seminar is to increase trainees’ cultural awareness and competence using a number of methods, such as formal presentations, experiential exercises, role plays, and assigned readings. Trainees will learn how their own personal/cultural history, attitudes, and biases may affect their understanding and interaction with different people. Trainees will learn to work effectively with individuals whose group membership, demographic characteristics, or worldviews create conflict with their own. Guest lecturers are invited to speak on topics, such as ethnic minority groups, immigrants, LGBT considerations, returning students, and women Veterans, among others.

Coordinators:
Grace Rosales, Ph.D.
Carissa Klevens-Thomas, Ph.D.

**TRAUMA SEMINAR (only required for 6 months)**
This is a weekly, half-day seminar attended by interns. In addition to the half day, interns will see one other patient for trauma treatment outside of this seminar time. The training experience includes lectures, training, application, and supervision in the treatment of PTSD using evidence-based treatments recommended by the 2017 VA/DOD Clinical Practice Guidelines. Seminars will involve discussions about the complex presentation of many of the Veterans being seen for trauma-related treatment. This will include exploration and consideration of the interplay between symptoms of PTSD and pain, substance use, sleep problems, and depression. Interns will be given the opportunity to work with Veterans exposed to a range of traumas, including combat, sexual, and childhood. This weekly seminar specifically includes training in the assessment of PTSD through use of the Clinician Administered PTSD Scale – 5 (CAPS-5) and in the treatment of PTSD with Cognitive Processing Therapy (CPT) and Prolonged Exposure (PE). In addition to the seminar/group supervision, interns will also meet with one of the coordinators for individual supervision.
Interns also have the opportunity to attend a weekly elective GLA-wide Trauma Didactic, which is a virtual weekly didactic attended by Trauma Recovery Services staff and trainees (pre-interns, interns and postdoctoral residents) across all of GLA who are interested in the assessment and treatment of PTSD. The seminar, which is led by a variety of guest speakers, focuses on increasing understanding of trauma/PTSD, reviewing evidence-based approaches for assessing and treating PTSD, examining both practice and theoretical issues in the treatment of PTSD and discussing emerging new knowledge in the field of trauma psychology. It also includes case discussions and consultation.

Coordinators:
Alex Barrad, Psy.D.
Rosy Benedicto, Ph.D.
Melissa Lewis, Ph.D.
Shana Spangler, Psy.D.

NEUROPSYCHOLOGY SEMINAR
This is a weekly, two-hour seminar attended by interns. It provides a rich learning environment in all kinds of assessment with particular focus on the neuropsychological assessment of adults with known or suspected neurologic injury or disease. The approach emphasizes the hypothesis-testing method, which takes from both standard test batteries as well as a variety of specialized techniques that evaluate intellectual functioning, attention, processing and psychomotor speed, language functioning, visuospatial functioning, memory, and executive functioning, etc. Training will include basic and correlative neuroanatomy, brain-behavior relationships, and neurologic syndromes. The patients assessed include male and female adult outpatients suffering from a broad array of neurocognitive and neurobehavioral disorders. Interns will learn a range of techniques, from brief screenings to comprehensive batteries. Psychodiagnostic assessment is also a focus in this seminar, and participants will develop proficiency in the interpretation of personality measures. An average weekly commitment of 8 hours per week is anticipated (including seminar time). Patients are scheduled outside of seminar time.

The didactic portion of the course includes presentations by the course instructor and case discussions. Interns will give case presentations on an ongoing basis throughout the year in the context of group supervision. The practicum portion of the course consists of a minimum of six evaluations per year; however, interns are encouraged to complete more than that if desirous of additional assessment experience. Additionally, interns will co-facilitate feedback sessions with the supervisor to help the patients and their family members understand the results of the clinical assessment. If social distancing protocols due to the COVID-19 pandemic are still in place at the time of training, interns will be trained to administer test batteries using remote technology, such as a HIPAA-compliant web-based video platform or by telephone.

Coordinator:
Alexis Kulick, Ph.D., ABPP/CN
**PSYCHOLOGY TRAINING SEMINAR**
This is a weekly, 60-minute seminar on a broad range of issues related to professional development, attended by interns and residents. Speakers are different each week and topics include: Laws and Ethics, Licensure Preparation, Military Culture, Wellness/Self Care, How to Start a Private Practice, and Hiring Opportunities in the VA, among others. Additionally, the interns and residents will be responsible for providing one presentation on research and one formal case presentation in the context of this seminar toward the end of the training year.

Coordinator:
Melissa Lewis, Ph.D.

**SUPERVISION SEMINAR**
This is a monthly, 60-minute seminar attended by interns and residents designed to provide training in competency-based clinical supervision. The seminar content is comprised of a combination of formal presentations, group discussions, vignettes, role plays, and assigned readings. Guest lecturers are invited to present on a number of different topics including the supervisory relationship; assessment, evaluation, and feedback; diversity considerations; ethical, legal, and regulatory considerations, among others.

Coordinator:
Melissa Lewis, Ph.D.
Each intern completes three rotations over the internship year. There are six rotations, and it is expected that all six are filled each trimester (rotations cannot accommodate more than one intern at a time). Time commitments for rotation-related clinical activities are 12-14 hours per week.

**ADDICTIVE BEHAVIORS CLINIC**
The Addictive Behaviors Clinic (ABC) offers an Intensive Outpatient Program (IOP) to male and female Veterans, ages 20 to 80, who misuse alcohol, heroin, cocaine, amphetamines, and/or other substances. Most patients have comorbid psychological problems. Patients in the IOP are required to commit to a minimum of 16 weeks of 3 days/week treatment and many continue in aftercare treatment for a year or longer. Therapeutic interventions are recovery oriented and include evidence-based treatment of early recovery and relapse prevention skills through the Matrix model of treatment, as well as DBT skills-based emotions management groups and CBT skills-based groups. Veterans develop a network of community and support.

Interns on this rotation participate as junior colleagues. Within the IOP, they lead psychoeducation groups, small and large therapy groups, administer and interpret self-report measures, and conduct individual psychotherapy while working within an interdisciplinary team to make both administrative and treatment decisions. Interns are encouraged to teach and to model adaptive behaviors, including self-awareness, boundary management, and accurate empathy. In addition to the IOP, trainees may also participate in harm reduction-based groups, which allow for contrast from the abstinence-based component of training, giving the trainee a chance to learn how to match treatment approaches with patient needs.

The treatment team is drawn from various disciplines, including nursing, recreation therapy, psychiatry, social work, and psychology. Learning to coordinate interdisciplinary care is an important focus of training on the rotation. Trainees are encouraged to develop and to model effective staff interactions, which patients can utilize to improve their own peer relationships. Interns on the ABC rotation will facilitate the following groups:

**Matrix Model Groups**
- The Matrix Model is an evidence-based group treatment that focuses on early recovery and relapse prevention skills with the use of cognitive behavioral, motivational enhancement, psychoeducation, and 12-step facilitation techniques. Veterans attend three days per week, and this is the foundation of the IOP.

**Aftercare Group**
- This is an ongoing group for Veterans who have completed the IOP, to provide extended support for Veterans in longer-term sobriety. While this group is more supportive in nature, topics are typically informed by Matrix topics.

**Emotions Management Group**
- This group is based on Dialectical Behavior Skills (DBT) Training (Linehan, 2014). Group content will focus on core mindfulness, interpersonal effectiveness, emotion regulation, and distress tolerance skill building. The group has been modified to be ongoing and open.
Mindfulness-Based Relapse Prevention Group
- This group is based on the Mindfulness-Based Relapse Prevention for Addictive Behaviors (Bowen, et al., 2011) protocol, modified to be an ongoing and open group in IOP. This group integrates mindfulness meditation practices with traditional relapse prevention skills.

The following group is optional pending intern interest:

Healthy Habits Group
- This group is based on the Group Treatment for Substance Abuse: A Stages-of-Change Therapy Manual (Velasquez, et al., 2001) protocol and CBT for Substance Use Disorders Among Veterans (DeMarce, et al., 2014), modified to be an open drop-in group. This group offers strategies based on the transtheoretical model of behavior change for Veterans who are thinking about reducing or modifying their current use of substances.

The goals of psychology training on the rotation are to:
1. Understand and implement the techniques of abstinence-based, relapse-prevention and harm-reduction approaches to treat substance use disorders.
2. Competently obtain drug histories while assessing co-morbidities.
3. Comprehend issues and treatment strategies for dual-diagnosis patients with special emphasis on PTSD.
4. Improve group therapy skills.
5. Understand the role of consistency and modeling in team cohesion and with patients.

ADAPTATIONS TO ROTATION ACTIVITIES DURING THE COVID-19 PANDEMIC:
- Due to the COVID-19 pandemic, in-person intakes, individual therapy and group therapy have been suspended to assure the safety of Veterans and staff. As such, ABC has moved to the use of both VA Video Connect (VVC), a secure web-based video platform, and telephone to perform intakes and to deliver individual and group therapy.
- If social distancing protocols due to the COVID-19 pandemic are still in place at the time of training, all interaction with Veterans, as well as the treatment team meetings, will continue via these virtual formats. In these virtual formats, fewer groups may be offered to Veterans, which may result in an increase in individual therapy patients to ensure adequate clinical experiences.

Clinical Supervisors:
Melissa Lewis, Ph.D. (Primary Supervisor)
Aleksey Zvinyatskovskiy, Ph.D.
HEALTH PSYCHOLOGY: BEHAVIORAL MEDICINE
The Health Psychology: Behavioral Medicine rotation aims to introduce trainees to the foundational competencies expected in the doctoral-level health psychologist. This includes developing skills in the assessment of psychological concerns related to the interplay between physical and mental health, developing expertise in the implementation of empirically-supported brief interventions, and developing the professional acumen necessary for working within interprofessional teams. The goal of this rotation is to provide the intern with the skill and experience in consultation, assessment, intervention, and education via direct experience with Veterans suffering from acute and chronic medical illnesses. Interns serve as collaborative members of interprofessional teams in which psychological skills and mind-body medicine are valued.

The clinical settings of the health psychologist are diverse; however, the competencies are similar across settings. These competencies include assessment strategies for individuals and systems, education, brief empirically-based interventions, evaluation of behavioral risk factors, consideration of the biopsychosocial factors that impact adherence to treatment, and consultation with patients, their family members and/or other providers on interprofessional teams. The health psychologist provides a variety of psychological interventions, such as group and brief individual psychotherapy, stress management, education and health-promotion activities, and support groups with a strong focus on evidence-based treatments. The health psychology rotation supervision team works closely with interns to provide the observation, modeling, and supervision required to develop competency in health psychology assessment and intervention skills.

Specific elements of the health psychology rotation include:

**Bariatric Surgery Evaluations**
- Interns serve as consultants to the bariatric surgery team, conducting a two-hour structured clinical interview, administering and scoring standardized measures, and writing a brief report with recommendations. The intern conducts a brief feedback session with the Veteran, usually by phone, and occasionally interns provide time-limited psychotherapy to support veterans in their weight loss efforts, either pre- or post-surgery.

**Biofeedback**
- Individual psychotherapy caseloads can include Biofeedback in which the following can be measured: breath pace (respiration), muscle activity (Electromyography), heart rate and heart rate variability (HR and HRV), peripheral finger temperature (thermistor), and galvanic skin response (GSR). Interns will learn how to use and interpret the measurements and how to teach Veterans skills for modulating the processes being measured.

**Coping with Chronic Pain Group**
- Interns will co-facilitate this 6-week group with another psychology trainee. Interns will provide psychoeducation about the biopsychosocial model and factors that affect chronic pain. Interns will train patients to use pain management strategies using techniques from both CBT and ACT approaches.
**Coping with Medical Illness Group**
- Interns will provide time-limited group therapy to promote self-care and manage stress in Veterans with chronic medical conditions and comorbid mood and anxiety spectrum disorders. Interventions are primarily cognitive behavioral and skills based. Each session will focus on a particular topic related to coping with medical illness, such as communication skills with providers, medication management, the relationship between stress and health, sleep hygiene, pain management, and valued living. Interns are encouraged to present on other relevant topics of interest to them.

**Mindfulness Based Stress Reduction (MBSR) - elective within this rotation only during the first and third trimesters**
- GLA is a national Center for an Innovation program, which has funded the creation of a Center for Integrative Medicine and Healing. This pioneering program is introducing Mindfulness Based Stress Reduction (MBSR). Interns may choose to participate in the facilitation of this 8-week MBSR group with a certified trainer.

  - *For trainees who are not able to engage in the MBSR elective, there is the option to facilitate other mindfulness-based groups, and to incorporate mindfulness into their individual treatment plans.*

**Progressive Tinnitus Management Program – elective**
- Tinnitus research at the VA National Center for Rehabilitative Auditory Research (NCRAR) has led to the development of an interdisciplinary Progressive Tinnitus Management (PTM) program. Audiologists and Mental Health providers work together to deliver portions of the protocol. The psychology intern will work directly with the Audiologists to provide psychoeducation and management skills to patients presenting with tinnitus.

**Time-Limited Individual Psychotherapy**
- Interns will provide time-limited psychotherapy to Veterans with comorbid physical and mental health problems and to implement various evidence-based approaches and interventions. Patients present with a range of medical diagnoses and both preexisting and newly diagnosed mental health issues. Cognitive Behavioral Therapy for Chronic Pain, a VA EBP, is one therapeutic approach that is emphasized on this rotation.

**ADAPTATIONS TO ROTATION ACTIVITIES DURING THE COVID-19 PANDEMIC:**
- Group and individual psychotherapy: Activities have transferred to telehealth modalities. Content of sessions is flexibly adapted in response to the medical and mental health concerns patients report experiencing in response to the pandemic, particularly for those patients who have pre-existing medical conditions.

- Biofeedback: Full Biofeedback protocols are not possible over telehealth, so we are doing what is feasible over remote technologies and looking into creative ways to provide more biofeedback experiences while adhering to social distancing guidelines.
• Individual Tele-Psychotherapy with Medical Inpatients related to COVID 19: The supervisor and intern on this rotation are currently part of a small group of health psychologists from around GLA who are responding to consults from the inpatient medical teams, especially those who are treating patients with COVID-19. This activity provides the opportunity to function as a health psychologist with inpatients, to serve as a consultant to the inpatient medical team, and to coordinate care with mental health providers from the larger GLA system.

Clinical Supervisors:
Sarah Duman Serrano, Ph.D., BCB (Primary Supervisor)
J. Greg Serpa, Ph.D. (MBSR Supervisor)
Aleksey Zvinyatskovskiy, Ph.D. (Tinnitus Group Supervisor)
HEALTH PSYCHOLOGY: GERIATRICS
The Health Psychology: Geriatrics rotation provides interns with a unique opportunity to develop knowledge and skills to work effectively with older Veterans and their families. Given the rising numbers of aging Veterans as well as their need for mental health services, the importance and opportunities for education and training in geropsychology are increasing. Geropsychology involves helping older persons and their families maintain well-being, overcome problems, and achieve maximum potential during later life. Rotation-specific goals allow interns to develop skills in assessment (cognitive screens, capacity evaluations), individual and group evidence-based psychotherapy, interprofessional collaboration; and recognition of the ethical dilemmas unique to geriatric care. Training focuses on the biopsychosocial and lifespan developmental perspectives that are important for understanding older adult patients. The Geriatrics rotation emphasizes closely supervised clinical experiences in the Community Living Center (CLC), the Hospice Unit, the Memory Clinic, and Home Based Primary Care (HBPC) program.

COMMUNITY LIVING CENTER (CLC) AND HOSPICE UNIT
The Community Living Center (CLC) and Hospice units are inpatient programs at the Nursing Home (Building 99) that offer interns opportunities to work with patients facing terminal diseases and end-of-life concerns as well as providing opportunities to work with families. Over the last few decades, there has been increasing empirical support for evidence-based psychosocial interventions to treat mental health concerns in older adults. Similarly, in recent years, there has been increasing efforts in nursing homes to enhance resident well-being and reduce negative behaviors by changing the treatment culture to emphasize more home-like and person-centered principles.

Within these programs, the intern will provide individual psychotherapy to patients in the CLC and Hospice Unit, and they will participate in interprofessional team meetings, family meetings, caregiver support, and treatment planning activities. The training will focus on facilitating understanding of how the role of the geropsychologist differs from roles in other settings. The rotation highlights the importance of the biopsychosocial approach, the interprofessional focus, and a holistic perspective.

MEMORY CLINIC
The Memory Clinic at SACC serves as a screening clinic for mild and major neurocognitive disorders in veterans aged 65 and older. This clinic provides comprehensive evaluation and development of treatment recommendations for older adults with suspected cognitive impairment and functional decline. In addition to diagnosing dementia, this clinic serves to provide capacity evaluation consultation for referring providers as well as dementia support to both patients and caregivers. As part of a memory clinic evaluation, interns will complete comprehensive chart reviews, conduct thorough clinical interviews, administer and score cognitive and psychological screening measures, gain skills in differential diagnosis of dementia, provide recommendations and education to patients and family members, and conduct capacity evaluations (i.e., capacity to live independently, capacity for medical decision making and capacity to assign a DPOA for healthcare), if needed.

HOME BASED PRIMARY CARE
Opportunities to work with Home Based Primary Care (HBPC) patients may be available. VA Home-Based Primary Care (HBPC) is a program that provides comprehensive longitudinal primary care to veterans with complex chronic disabling disease. The care is delivered by an interdisciplinary team comprised of medicine, nursing, social work, occupational therapy, dietetics, pharmacy, and psychology.
Interns may provide psychodiagnostic interviews, brief cognitive testing, and/or psychotherapy intervention with referred HBPC patients. If social distancing procedures continue to be in place, these services will be provided using HIPAA-compliant web-based video platform or telephone.

**Role of the Intern:**
The intern will provide a full range of psychological services to patients and their families, including screening, psychological, cognitive, and capacity assessments, psychotherapy, crisis intervention and prevention-oriented services. Mental health treatment and prevention-oriented services will emphasize evidence-based and best practice approaches. The intern will be involved in the following specific areas:

- Conducting initial intakes which will include brief cognitive and depression screens along with suicide risk assessment. The screening for cognitive deficits will also be used to address specific functional questions or to determine if a referral for a complete neuropsychological assessment is needed.
- Promoting the delivery of evidence-based psychosocial and environmental interventions for reducing behavioral and psychological symptoms, such as agitation, aggression, and wandering, associated with neurocognitive impairment and other neuropsychiatric and mental health conditions.
- Assisting in performing capacity/competency assessments when there are questions about a Veteran’s ability to make medical decisions, perform other specific functions, or live independently. Assessing Veterans’ understanding of advanced directives and other forms of consent and assisting staff in determining how to present treatment options and other such material to residents in a format they can understand.
- Providing individual interventions to support Veterans who are coping with feelings of grief and loss associated with disability, adjustment to the nursing home environment, and other life transitions.

**ADAPTATIONS TO ROTATION ACTIVITIES DURING THE COVID-19 PANDEMIC:**
- Activities have transferred to telehealth modalities. Interns will be trained to provide all psychological services using remote technology, such as a HIPAA-compliant web-based video platform or telephone.

Clinical Supervisor:
Falguni Chauhan, Ph.D. (Primary Supervisor)
Ruth Robbins, Ph.D.
MENTAL HEALTH CLINIC (MHC)

The Mental Health Clinic (MHC) is an interprofessional clinic designed to serve the mental health needs of Veterans. Disciplines include primarily psychiatry, psychology, social work, and nursing. In this training setting, interns will work with Veterans presenting with a variety of different diagnoses. Referrals come from psychiatry and social work within the MHC, Primary Care Mental Health Integration providers, treatment providers outside of mental health, and from other VA systems. Intern activities include functioning within the context of an interprofessional team to conduct weekly initial assessments and provide individual and group psychotherapy to a wide range of patients. Interns may also engage in patient triage/crisis intervention with walk-ins/open access appointments, which would include risk evaluation and treatment planning (e.g. hospitalization, connecting with psychiatry).

Patients present with a range of preexisting and newly diagnosed mental health issues, including depression, anxiety disorders, psychotic disorders, substance use, and personality issues, among others. Interns will provide time-limited psychotherapy using various evidence-based approaches and interventions, including Cognitive Behavioral Therapy (CBT), Interpersonal Psychotherapy for Depression, and Exposure and Response Prevention (ERP) modalities, among others. Treatment is individualized to assist Veterans in achieving their personal goals in the community. Interns may be involved in facilitating the following groups:

**ACT Group**
- This group uses a flexible application of Acceptance and Commitment Therapy. This is a 10-week group, in which Veterans are seen for a range of clinical presentations that include depression, anxiety, trauma/PTSD, and/or personality features. Interns will learn how to conduct in-the-moment functional analysis and apply relevant core processes of ACT.

**Anger Management**
- This is a 16-week, evidence-based, present-focused approach to psychotherapy that helps patients learn to communicate their anger in a clear and direct way that is not destructive or aggressive. The focus is on issues participants are dealing with in the present, and they will learn anger management techniques with the goal of developing self-control over their actions.

**CBT for Anxiety**
- This is a 12-week, evidence-based, present-focused approach to psychotherapy that helps patients to identify and modify dysfunctional thinking patterns/cognitions, maladaptive emotions, and behaviors in order to assist them in resolving current problems related to anxiety. The group introduces Veterans to interoceptive exposures to physical symptoms, Exposure and Response Prevention (ERP) approaches, and personalized exposure hierarchies. Veterans are seen on a weekly basis.

**Managing Behavior and Affect**
- This group is based on Dialectical Behavior Skills Training (Linehan, 2014). Group content will focus on core mindfulness, interpersonal effectiveness, emotion regulation, and distress tolerance skill building.
ADAPTATIONS TO ROTATION ACTIVITIES DURING THE COVID-19 PANDEMIC:

- Group and individual psychotherapy: Activities have transferred to telehealth modalities. Content of sessions may be adapted in response to the medical and mental health concerns patients report experiencing in response to the pandemic.

Clinical Supervisors:
Charles DeLeeuw, Ph.D.
Carissa Klevens-Thomas, Ph.D. (Primary Supervisor)
Sarah Duman Serrano, Ph.D., BCB
PRIMARY CARE MENTAL HEALTH INTEGRATION

In this rotation, interns will engage in co-located collaborative care on an interdisciplinary primary care team. They will provide brief (30-minute) functional assessments to patients with a wide variety of presenting problems who may be experiencing their first contact with mental health services or who may be re-establishing care. Interns will have the chance to conduct intake interviews, generate joint treatment plans with psychiatrists, primary care providers, and other healthcare professionals, and perform “curb side” consults, as appropriate. Interns will actively engage in patient triage, determining whether patients should be seen in primary care or referred for more extensive treatment through specialty mental health services. If additional treatment is warranted, the intern will make the appropriate referral(s). Within primary care, the intern will deliver brief treatments to patients with mild to moderate psychopathology. Treatments delivered in PCMHI may target anxiety, depression, insomnia, history of trauma, adjustment disorders, chronic pain, and psychological factors related to chronic medical conditions. Additionally, interns may engage in diagnostic clarification and treatment planning to aid in making appropriate referrals to specialty mental health.

Patients seen in the PCMHI clinic are treated on a brief basis (4-6, 30-minute sessions) using a variety of evidence-based treatment approaches, which can include skills-based interventions, Cognitive Behavioral Therapy (CBT), Acceptance and Commitment Therapy (ACT), Biofeedback, Mindfulness-based psychotherapy, Cognitive Behavioral Therapy for Insomnia (CBT-I), and Motivational Interviewing (MI).

Activities for the intern participating in this rotation will involve multiple weekly intakes, brief individual psychotherapy, group psychotherapy, and walk-in evaluations, as appropriate.

The intern will have the opportunity to co-facilitate the following groups:

**Introduction to Relaxation**

- This transdiagnostic group educates patients on the physiological effects of unmanaged stress and helps them to build skills in a variety of evidence-based mind-body approaches. This can be effective in reducing subjective stress, depression, anxiety, physical pain, hypertension, insomnia, etc. Patients begin with the introductory group and are then offered their choice of weekly continuing practice yoga or meditation groups for skills enhancement. There is a new cycle every 4 weeks in order to provide prompt access to services.

**MOVE – Weight Management for Veterans**

- This national, evidence-based program fully integrates psychology into a multidisciplinary team of medical providers, dieticians, and health educators treating obesity. Interns provide individual and group interventions incorporating motivational enhancement strategies and relevant psychoeducation.

**ADAPTATIONS TO ROTATION ACTIVITIES DURING THE COVID-19 PANDEMIC:**

- All training activities have been transferred to telehealth modalities. Functional assessments, brief interventions and group psychotherapy sessions are completed by telephone or VVC. Since most of the patients in primary care clinics are currently being seen remotely, many of our same-
day handoffs occur via telephone or VVC as well. In instances when patients present to the clinic in-person, all efforts are made for them to be seen from a separate office via VVC, unless otherwise indicated.

- While it is sometimes necessary for PCMHI staff members to see patients face-to-face while supporting primary care providers during urgent or emergent situations, trainees will be exempt from such activities until it is deemed appropriate for trainees to return to face-to-face patient care by the training program at large.

**Clinical Supervisors:**
Sarah Duman Serrano, Ph.D., BCB
Austin Grinberg, Ph.D.
Kaddy Revolorio, Psy.D.
Aleksey Zvinyatskovskiy, Ph.D. (Primary Supervisor)
**WOMEN’S HEALTH CLINIC (WHC)**
The Women’s Health Clinic (WHC) at the Sepulveda VA is a comprehensive women’s health care center that provides primary and specialty (e.g., OB/GYN) care, as well as psychiatry, psychology, and social work services. The Women Veteran population seen in the WHC is diverse in terms of age, race, ethnicity, and sexual orientation. Women Veterans present for mental health treatment with a range of psychiatric diagnoses such as mood disorders, anxiety disorders, substance use disorders, and personality disorders. A subset of women Veterans presents with combat-related trauma, military sexual trauma (MST), and other non-military-related trauma (e.g., childhood abuse). Many of the women Veterans seen in the WHC have served in recent combat zones. Common medical diagnoses include musculoskeletal disorders, including chronic pain, heart disease, and diabetes. Many women also present either during or post-pregnancy for mental health services. Interns have the opportunity to provide services with a focus on evidence-based treatments for PTSD, Dialectical Behavior Therapy, and issues specifically related to female veterans in the context of an interprofessional team and work closely with providers from multiple disciplines.

Interns on the WHC rotation will conduct weekly comprehensive mental health initial assessments which are designed to increase their diagnostic and interviewing skills as well as build strong treatment-planning abilities. Interns will also provide individual psychotherapy to female veterans using evidence-based interventions such as Cognitive-Behavioral Therapy, Cognitive Processing Therapy, Prolonged Exposure Therapy, and Dialectical Behavior Therapy. In addition, the intern will co-facilitate the following female-only groups:

**Cognitive Processing Therapy Group for PTSD**
- Interns will co-facilitate this 12-week evidence-based group treatment for PTSD with a Women’s Health Clinic psychologist. The group is for female veterans who present with a diverse range of trauma exposure (e.g. MST, childhood abuse, combat exposure).
- If the group is not offered during the rotation, the intern will receive live observation of a CPT case from primary supervisor.

**DBT Skills Group**
- This group is based on Dialectical Behavior Skills (DBT) Training (Linehan, 2014). Group content focuses on core mindfulness, interpersonal effectiveness, emotion regulation, and distress tolerance skill building. Interns will co-facilitate this 17-week group with the Women’s Health Clinic Postdoctoral Fellow or Psychologist and participate in weekly DBT Consultation Team with all members of WHC Psychology.

**PTSD 101- Psychoeducational Group**
- PTSD 101 is a 6-week psychoeducational and skills building group designed for those who are entering trauma treatment. Veterans will learn to better understand their diagnosis and learn skills to help manage symptoms of PTSD. Interns will co-facilitate this group with a Women’s Health Clinic Psychologist.
The following groups are also run within the Women’s Health Clinic and may be available pending intern interest:

Lesbian, Bisexual, Queer Women’s Group

- This group is an ongoing process group for women who identify as LBQ. The group is designed to run as a process group informed by Yalom group psychotherapy techniques. The group provides a space for women to discuss their unique experiences as queer veterans of intersecting identities within a social political context. The intern will have an opportunity to co-facilitate this group with a WHC psychologist which will provide exposure to running a non-manualized group.

Race Based Trauma Group

- This is a group for veteran women of color who have been impacted by racism. This 9 to 12-week manualized treatment is rooted in Racial Identity Theory, Feminist Theory, Mindfulness and Acceptance and Commitment Therapy. The aim of the group is to guide participants with use of experiential exercises to explore internalized and externalized racialized messages of self and their impact on current functioning. Using mindfulness and ACT interventions, women find empowerment in living their values while navigating racist environments. If interested, the intern may have an opportunity to co-facilitate this group with a WHC psychologist.

There is the possibility of participating in other groups within the WHC depending on each intern’s areas of interest. In addition, interns may have the opportunity to start other psychotherapy groups that are appropriate for the treatment needs of women Veterans and that are of interest to them. Interns will attend the monthly Women’s Health Interprofessional Staff Meeting. In addition, interns will receive individual supervision as well as participate in a weekly DBT Consultation group with psychology staff and trainees.

**ADAPTATIONS TO ROTATION ACTIVITIES DURING THE COVID-19 PANDEMIC:**

- All group and individual psychotherapy activities have continued to run, but have transferred to telehealth modalities (video and telephone).

Clinical Supervisors:
Marissa Burgoyne, Psy.D. (Primary Supervisor)
Grace Rosales, Ph.D.
ELECTIVES

As noted, interns have **EIGHT** hours per week that they can apply to electives or to other training activities, such as adding time to rotations, taking on additional assessment cases, focusing on trauma work, etc. (pending approval of the training committee). Interns must select at least two elective activities, but the schedule can accommodate all three electives, if desired. If social-distancing protocols due to the COVID-19 pandemic are still in effect at the time of training, all training experiences will be conducted using virtual modalities, such as video and telephone.

**HALF-YEAR OR FULL-YEAR ELECTIVE IN ACT SEMINAR (4 hours/week)**

ACT is a transdiagnostic third-wave cognitive-behavioral treatment that addresses human pain and suffering; patients are encouraged to accept thoughts and feelings, choose valued directions, and take action. Interns will attend a two-day didactic and experiential training in ACT at the beginning of the training year. After the completion of the training, interns will work with a range of clinical applications and implement ACT for two clinical hours per week. Patients will be scheduled during the seminar time, and, as time permits, the supervisor will provide direct observation. Supervision will be conducted in a group format and will incorporate the use of behaviorally-based feedback, ACT exercises, videos, and reading lists. Individual supervision is available upon request.

**Clinical Supervisors:**
Charles DeLeeuw, Ph.D.

**FULL-YEAR ELECTIVE IN COUPLES THERAPY SEMINAR (4 hours/week)**

In this seminar, interns will learn to view couples as organizationally complex emotional systems in which members engage in repetitive transactions. Therapeutic interventions are directed at collaborating with couples as they, together, seek new solutions to previously unresolved conflicts. Interns will learn how to deliver Integrative Behavioral Couples Therapy (IBCT). A consultation room with a one-way mirror allows observers to view ongoing treatment as conducted by trainees or as demonstrated by the supervisor. Live supervision of trainees conducting therapy, co-therapy with supervisor and trainees, videotapes of master therapists, and continuous case conferences provide exposure to a variety of clinical situations and lead to enhanced clinical skills. Individual supervision is available to supplement group supervision. Aside from the initial session, patients will be scheduled outside of seminar time. It is expected that the intern will carry a case-load of two couples at a time.

**Clinical Supervisor:**
Falguni Chauhan, Ph.D.
HALF-YEAR OR FULL-YEAR ELECTIVE IN INSOMNIA CLINIC (4 hours/week)
After completing a two-day workshop, trainees will deliver Cognitive Behavioral Therapy for Insomnia (CBT-I) and other behavioral treatments for sleep disorders and nightmares within a primary care setting. Trainees and supervisors work closely with sleep medicine physicians and other healthcare providers to manage patients with multiple sleep-related difficulties.

Clinical Supervisors:
Austin Grinberg, Ph.D.
Jennifer Martin, Ph.D., FAASM, DBSM
Aleksey Zvinyatskovksiy, Ph.D.

Facility and Training Resources:
Interns are provided with office space and computers necessary for patient care and administrative responsibilities. They have access to the VA Medical Library services as well as VA Intranet and Internet resources for clinical work and research. The Psychology Department has a Psychology Assessment Lab, which includes a wide variety of psychological assessment instruments and test scoring programs.

Administrative Policies and Procedures:
Authorized Leave: The Sepulveda Ambulatory Care Center's policy on Authorized Leave is consistent with the national standard. In the course of the year, interns accrue 13 vacation days and 13 sick days (4 hours of vacation and 4 hours of sick time are accrued every two-week pay period) and 10 paid holidays. Interns may request up to 5 days (40 hours) of educational leave/administrative absence (AA) for off-site educational activities. The following professional activities qualify: defending one's dissertation, postdoctoral fellowship interviews, conferences, pre-licensure seminars, and workshops outside of GLA.

Stipend: The stipend for the training year is $29,613

Benefits: VA interns are eligible for health insurance (for self, legally married opposite and same sex spouse, and legal dependents) and for life insurance.

Due Process: All trainees are afforded the right to due process in matters of problematic behavior and grievances. A copy of our due process policy is available on request.

Privacy policy: We will collect no personal information from you when you visit our Website.

Self-Disclosure: Our program sets no requirement for self-disclosure.

Family and Medical Leave: The internship program allows for parental leave as well as for leave in the event of serious illness. Family and Medical Leave are granted for the birth of a child and care of a newborn, or placement of a child with oneself for adoption or foster care; a serious health condition of a spouse, son or daughter, or parent; or one’s own serious health condition. Interns are required to complete the full 2080-hour requirement; any leave time will result in an extension of the training contract. Interns are encouraged to address any requests for leave with the Director of Training as early as possible.
**Reasonable Accommodations**: It is the policy of VA to provide reasonable accommodations to qualified applicants and employees with disabilities in compliance with the Americans with Disabilities Act (ADA).

**Liability Protection for Trainees**: When providing professional services at a VA healthcare facility, VA-sponsored trainees acting within the scope of their educational programs are protected from personal liability under the Federal Employees Liability Reform and Tort Compensation Act 28, U.S.C.2679 (b)-(d).
TRAINING STAFF

Barrad, Alex, Psy.D.
Training Roles: Supervisor; Section Chief of TeleMental Health, GLA
Training Activities: Trauma Recovery Services
Undergraduate Program: University of California, San Diego, 2007
Doctoral Program: PGSP-Stanford Psy.D. Consortium (Clinical), 2013
Doctoral Internship: VA Sepulveda Ambulatory Care Center, 2012-2013
Postdoctoral Residency: VA Loma Linda Healthcare System (Trauma), 2013-2014
Areas of Interest: Posttraumatic Stress Disorder, Treatment of Sleep Disorders, Evidence-Based Treatments, Substance Use Disorders
Certifications: Certified VA Acceptance and Commitment Therapy (ACT), Prolonged Exposure (PE), and Cognitive Behavioral Conjoint Therapy (CBCT) for PTSD Provider
Orientation: Cognitive-Behavioral, Integrative

Benedicto, Rosy, Ph.D.
Training Roles: Supervisor, Co-Facilitator of Trauma Seminar
Training Activities: Trauma Seminar
Undergraduate Program: University of California, San Diego, 2006
Doctoral Program: University of Nebraska-Lincoln (Clinical), 2015
Postdoctoral Residency: West Los Angeles VA Healthcare Center (Trauma Psychology), 2015-2016
Areas of Interest: Posttraumatic Stress Disorder, Co-occurring Trauma and Substance Use Disorders, Multiculturalism, Family-Focused Approach to Treatment, Intimate Partner Violence Perpetration, Evidence-Based Treatments
Certifications: Certified VA Prolonged Exposure (PE) Provider; Certified VA Cognitive Processing Therapy (CPT) Provider; Peer-Reviewed PE Consultant by the Emory University Prolonged Exposure Consultant Training Program
Orientation: Cognitive-Behavioral

Burgoyne, Marissa, Psy.D.
Training Roles: Supervisor, Section Chief for Women’s Mental Health, GLA
Training Activities: Women’s Health Clinic
Undergraduate Program: Brown University, 1994
Doctoral Program: Pepperdine University (Clinical), 2011
Doctoral Internship: VA Loma Linda, 2010-2011
Academic Affiliations: Adjunct Professor, Pepperdine University
Areas of Interest: Women’s Health, Posttraumatic Stress Disorder, Anxiety Disorders, Readjustment Issues Among Student Veterans, Development and Implementation of Group Interventions, Evidence-Based Practice, Individual and Group Therapy.
Certification: Certified VA Cognitive Processing Therapy (CPT) Provider; Certified VA Prolonged Exposure Therapy (PE) Provider
Orientation: Cognitive-Behavioral
