Anna.Okonek@va.gov

APPIC MATCH Numbers: General Internship  113811
Geropsychology  113812

Applications due: November 1, 2020

Accreditation Status
The doctoral internship at the West Los Angeles VA Healthcare Center is accredited by the Commission on Accreditation of the American Psychological Association. Our next site visit will be during the calendar year 2027.

Inquiries regarding the accreditation status of our internship program may be directed to:

Office of Program Consultation and Accreditation
American Psychological Association
750 1st Street, NE, Washington, DC 20002-4242
Telephone: 202-336-5979 / Email: apaaccred@apa.org
Web: http://www.apa.org/ed/accreditation

Application Procedures
Applications for full-time internship positions in psychology will be accepted from students who are enrolled and in good standing at doctoral programs in clinical or counseling psychology accredited by the American Psychological Association (APA) or the Canadian Psychological Association (CPA), doctoral programs in Clinical Science accredited by the Psychological Clinical Science Accreditation System (PCSAS), or an APA or CPA-accredited respecialization training program in Clinical or Counseling Psychology. The training program is funded to support eight full-time internship positions, three of which are designated for trainees who will spend six months on rotations in Geropsychology. The 2021-2022 internship year will begin on August 2, 2021.

Applications must be submitted through the AAPI Online portal by 11:59PM ET on November 1, 2020. Please include the following information in your cover letter:

1. Indicate if you are applying to the General Track or the Geropsychology Track. Applicants should apply to one track only.
2. List your top 6 rotations of interest in descending order of priority. You are not committed to these rotations should you match here for internship.
3. Our program requires that applicants have accrued a minimum of 400 hours of supervised direct intervention and 100 hours of assessment experience at the time of application to internship. If you have been unable to acquire sufficient direct service hours this year due to the COVID-19
pandemic, please explain your situation and describe any additional training experiences you have or will have received to prepare you for internship.

Our procedures for intern recruitment and selection are governed by the Department of Veterans Affairs, the American Psychological Association (APA), and the Association of Psychology Postdoctoral and Internship Centers (APPIC). This internship site agrees to abide by the APPIC policy that no person at this training facility will solicit, accept or use any ranking-related information from any intern applicant.

Please contact the Director of Training if you have any questions.

Program Tables Updated 7/6/20

### Internship Program Admissions

Briefly describe in narrative form important information to assist potential applicants in assessing their likely fit with your program. This description must be consistent with the program’s policies on intern selection and practicum and academic preparation requirements:

**Program Eligibility**

Minimum qualifications include U.S. citizenship and enrollment and good standing at an American Psychological Association (APA) or Canadian Psychological Association (CPA) accredited graduate program in Clinical, Counseling, or Combined psychology or Psychological Clinical Science Accreditation System (PCSAS) accredited program in Clinical Science. Persons with a doctorate in another area of psychology who meet the APA or CPA criteria for respecialization training in Clinical, Counseling, or Combined Psychology are also eligible.

In addition, applicants must have completed all coursework and been approved for internship status by the graduate program training director. We require that applicants have passed their comprehensive exams and have had their dissertation proposal approved by the start of internship. Because of the demands of the program, we prefer that applicants have completed or have made significant progress on their dissertation before starting the internship. Applicants should have acquired a minimum of 400 hours of supervised direct intervention and 100 hours of assessment experience at the time of application to internship. Exceptions may be considered for applicants whose direct service hours have been impacted negatively by the pandemic.

**Eligibility Requirements for Psychology Trainees in VA**

The Department of Veterans Affairs (VA) adheres to all Equal Employment Opportunity and Affirmative Action policies. As a Veterans Health Administration (VHA) Health Professions Trainee (HPT), you will receive a Federal appointment, and the following requirements will apply prior to that appointment.

1. **U.S. Citizenship.** HPTs who receive a direct stipend (pay) must be U.S. citizens.

2. **U.S. Social Security Number.** All VA appointees must have a U.S. social security number (SSN) prior to beginning the pre-employment, on-boarding process at the VA.

3. **Selective Service Registration.** Male applicants born after 12/31/1959 must have registered for the Selective Service by age 26 to be eligible for U.S. government employment, including selection as a paid or WOC VA trainee. For additional information about the Selective Service System, and to register or to check your registration status visit [https://www.sss.gov/](https://www.sss.gov/).

4. **Fingerprint Screening and Background Investigation.** All HPTs will be fingerprinted and undergo screenings and background investigations. Additional details about the required background checks can be found at the following website: [http://www.archives.gov/federal-register/codification/executive-order/10450.html](http://www.archives.gov/federal-register/codification/executive-order/10450.html).
5. **Drug Testing.** Per Executive Order 12564, the VA strives to be a Drug-Free Workplace. HPTs are not drug-tested prior to appointment, however are subject to random drug testing throughout the entire VA appointment period. You will be asked to sign an acknowledgement form stating you are aware of this practice.

Additional information regarding eligibility requirements for appointment as a psychology HPT can be found at: [http://www.psychologytraining.va.gov/eligibility.asp](http://www.psychologytraining.va.gov/eligibility.asp).

**Selection of Applicants**

Selection of applicants for admission is based on several factors. These factors include goodness of fit between the student and those of the training program, educational background and interests consistent with our program’s scientist-practitioner model, the quality of a student's education at the graduate and undergraduate levels, the quality and diversity of practicum experiences, evidence of scholarship based on productivity in research, teaching or other professional activities, letters of recommendation and personal qualities reflected in the application materials and in the interview. We prefer applicants who have had diverse clinical experiences with a variety of patient populations, including training in VA or other public-sector settings. Because our internship places a heavy emphasis on assessment, practicum experience should include personality and cognitive assessment and experience writing integrated testing reports. Applications are reviewed by the Director of Training and training program supervisors.

Our internship program values individual and cultural diversity and strongly encourages qualified candidates from all backgrounds to apply. In keeping with our commitment to diversity, we seek an internship class that represents a wide range of backgrounds, interests, talents and life experiences. It is the policy of the Department of Veterans Affairs to provide equal opportunity in employment for all qualified applicants, which prohibits discrimination based on race, color, religion, national origin, sex (including gender identity, transgender status, sexual orientation, and pregnancy), age, disability, genetic information, marital status and parental status. It is the policy of VA to provide reasonable accommodations to qualified applicants and employees with disabilities in compliance with the Americans with Disabilities Act (ADA).

Does the program require that applicants have received a minimum number of hours of the following at the time of application? If yes, indicate how many:

Post-Internship Activities

Our interns have been very successful in obtaining competitive postdoctoral fellowships and employment upon completion of internship. Over the last 5 years, immediately following internship 35 of our 39 interns obtained postdoctoral fellowships (25 clinical, 9 research, 1 clinical/research), two obtained academic faculty positions, and two returned to their doctoral programs to complete their dissertations. Many continue to be actively engaged in scholarly activity, and all interns who are engaged in clinical service delivery have obtained licensure or plan to seek it. Based on our outcome data, we feel confident that our Training Program prepares interns for professional careers consistent with our program’s aim, training model and philosophy. Interns who train at WLA go on to careers in VA, academic medical center, or other public sector settings, academia, as well as the private sector.
Graduate Programs of Recent Interns (2016-current)

Intern Class of 2020-2021
Fuller Graduate School of Psychology
Pepperdine University
San Diego State University/University of California, San Diego Joint Doctoral Program
University of California, Los Angeles (3)
University of Notre Dame
University of Southern California

Intern Class of 2019-2020
George Mason University
Palo Alto University
Pepperdine University
PGSP-Stanford Psy.D. Consortium
University of California, Berkeley
University of Florida
University of Rhode Island

Intern Class of 2018-2019
Loyola University of Chicago
Pepperdine University
University of Arizona
University of California, Los Angeles
University of Notre Dame
University of Oregon (Counseling)
University of Southern California (2)

Intern Class of 2017-2018
Pacific Graduate School of Psychology
Pepperdine University
University of Arizona
University of California, Los Angeles (3)
University of Miami
University of Southern California

Intern Class of 2016-2017
Pacific Graduate School of Psychology (2)
University of California, Los Angeles
University of Florida
University of Michigan
University of Missouri – St. Louis
Vanderbilt University
Washington State University
Postdoctoral Fellowships of Interns from the Classes of 2015-16 to 2019-20

University of Florida  
University of Pittsburgh  
VA Pittsburgh Healthcare System MIRECC Fellowship

**Academic Positions**
California State University, San Marcos  
University of Texas at Austin
Open House/Interviews

Applicants who are selected for interview are invited to attend any one of the four virtual Open House/Interview sessions held on January 5, 7, 12 and 14, 2021. Applicants will indicate their preferences for interview dates once they are contacted by the Director of Training. During the 3-hour morning Open House, applicants meet with the Director of Training, training supervisors from the different rotations and the current intern class. Each applicant will participate in a one-hour individual interview with one of the training staff. All applicants will be notified of their interview status by December 15, 2020.

Internship Year Schedule

The internship is full time for one year beginning August 2, 2021 and ending July 29, 2022. Internship appointments are for 2080 hours, which is full time for a one-year period. The workweek is Monday through Friday 8:00 am to 4:30 pm, with no after hours on-call responsibilities.

Facility and Training Resources

Interns are provided with office space and computers necessary for patient care and administrative responsibilities. They have access to VA Intranet and Internet resources for on site and remote clinical work and research. The Psychology Department has a comprehensive Psychology Assessment Lab that includes a wide variety of up-to-date psychological assessment instruments and test scoring programs.

Administrative Policies and Procedures

Authorized Leave: The West Los Angeles VA Healthcare Center’s policy on Authorized Leave is consistent with the VA national standard. In the course of the year, interns accrue 13 vacation days and 13 sick days and receive 10 paid holidays. Interns may request up to five days of educational leave for off-site educational activities, including conferences, presentations at professional meetings, the oral defense and postdoctoral fellowship or job interviews.

Due Process and Grievance Procedures: All trainees are afforded the right to due process in matters of problematic behavior and grievances. A copy of our due process policy is available on request.

Privacy policy: We will collect no personal information from applicants when they visit our Website.

Self-Disclosure: The program does not require interns to disclose sensitive personal information unless the information is necessary to evaluate or obtain assistance for interns whose personal problems could reasonably be judged to be preventing them from performing their training-related activities in a competent manner or if posing a threat to others.

Medical/Family Leave: The internship program allows for leave in the event of serious illness as well as for parental leave. Leave can granted for the birth of a child and care of a newborn, or placement of a child with oneself for adoption or foster care; a serious health condition of a spouse, son or daughter, or parent; or one’s own serious health condition. Interns are required to complete the full 2080-hour requirement; any approved leave time will result in an extension of the training contract. Interns are encouraged to address any requests for leave with the Director of Training as early as possible.

Reasonable Accommodations: It is the policy of VA to provide reasonable accommodations to qualified applicants and employees with disabilities in compliance with the Americans with Disabilities Act (ADA).

Liability Protection for Trainees: When providing professional services at a VA healthcare facility, VA-sponsored trainees acting within the scope of their educational programs are protected from personal liability under the Federal Employees Liability Reform and Tort Compensation Act 28, U.S.C.2679 (b)-(d).
Psychology Setting

The VA Greater Los Angeles Healthcare System (GLA) is the largest health care system within the Department of Veterans Affairs. It consists of a tertiary care facility (West Los Angeles Healthcare Center, also known as “West LA”), two ambulatory care centers and 8 community-based outpatient clinics. GLA provides comprehensive ambulatory and tertiary care to Veterans in five counties in Southern California, with 716 beds, over 5,000 employees and an annual operating budget of over $810 million.

In fiscal year 2019, GLA provided medical and mental health services to over 88,000 Veterans residing in the primary service area, including Los Angeles County, which has the largest concentration of Veterans of any county in the United States. It provides a full spectrum of primary and tertiary inpatient and ambulatory care services, including acute, sub-acute, rehabilitation, extended care, mental health services, telehealth and home healthcare. GLA is one of 23 national Polytrauma Network Sites (PNS) that serves Operation Enduring Freedom, Operation Iraqi Freedom, and Operation New Dawn (OEF/OIF/OND) Veterans who have complex medical and psychological injuries, including traumatic brain injury. GLA's Homeless Program has been designated as a Homeless Program Center of Excellence. To find out more about GLA, please go to http://www.losangeles.va.gov/index.asp.

The West Los Angeles VA Healthcare Center, which is the site for this internship program, is the hospital, research, and administrative center for GLA. It is situated on a 388-acre campus with 150 buildings. The south campus is primarily devoted to medical/surgical and inpatient psychiatric services located in the main medical center building as well as outpatient mental health services in two neighboring buildings. The north campus facilities include two long-term care buildings (Community Living Center) with 352 beds, a 296-bed Domiciliary, recovery-oriented outpatient programs, and research and administrative offices. The 496-bed California State Veterans Home, which was completed in 2010, is also located on the north campus.

GLA directs the Department of Veterans Affairs' largest educational enterprise. It serves as a training site for 61 ACGME-approved medical residency programs offering 349 residency positions and is affiliated with more than 45 colleges, universities and vocational schools. In addition, the VA Office of Academic Affiliations (OAA) sponsors eight medical fellowship positions. GLA sponsors a total of 85 positions in associated health training programs that include dentistry, podiatry, optometry, pharmacy, clinical psychology, social work and dietetics. GLA is also the site for the Advanced Practice Nursing programs sponsored by local universities. Primary university affiliates include the UCLA David Geffen School of Medicine and the USC School of Medicine.

At GLA there are more than 225 investigators conducting over 540 research projects in all areas of medical and mental health. GLA has numerous VA and NIH funded Clinical Research Centers including: The VA Geriatric Research, Education and Clinical Center (GRECC); the VISN 22 Mental Illness Research, Education and Clinical Center (MIRECC); the Parkinson's Disease Research, Education and Clinical Center (PADRECC); the Cancer Center, the VA Health Services Research Center of Excellence for the Study of Provider Behavior; the Center for Ulcer Research and Education (CURE), a VA/UCLA Consortium for gastrointestinal research; and the VA/UCLA Center for the Neurobiology of Stress.

VA Greater Los Angeles is a designated Center of Innovation for the national Office of Patient Centered Care and Healthcare Transformation. Our Integrative Health and Healing Center offers a wide variety of clinical programs for Veterans and staff. Psychologists play a leading role in implementing evidence-based integrative modalities of care, training interprofessional staff to provide these interventions, and conducting quality improvement and funded research studies on integrative care outcomes. Some of the modalities include mindfulness-based interventions, Tai Chi, yoga, acupuncture and introductory courses for integrative self-management practices. GLA has a fully developed Mindfulness Based Stress Reduction program (MBSR) for Veterans and staff with an ongoing retreat practice for our Veteran graduates. Currently, two Psychology Residents are participating in formal training in integrative modalities in our Interprofessional Health program.
The Homeless Patient Aligned Care Team (HPACT) is a nationally designated homeless PACT delivering “whole health care.” Established in July 2014, HPACT’s five fully staffed teams are among the country’s most highly concentrated groups of integrated mental health and primary care teams. The program incorporates internal medicine, nurse practitioner, psychology, psychiatry and pharmacy fellows into the interprofessional team established by the faculty.

The West Los Angeles VA Healthcare Center is located in one of the most culturally diverse cities in the nation and serves U.S. military Veterans who represent a mixture of ethnic, cultural, and individual diversity. Of the Veterans who reported their race/ethnicity when registering for care in Fiscal Year 2019, approximately 53% identified as White, 20% as African American, 16% as Hispanic, 4% as Asian, and 1% as Native American. Our overall Veteran population is approximately 90% male. Over 45% of Veterans receiving care here are over the age of 65, with 12% under the age of 35 and 20% between the ages of 55-64 years. There are 9,062 OEF/OIF Veterans who have been enrolled at GLA. With regard to socioeconomic status, 73% of Veterans from all military eras report an annual income of less than $25,000, with 51% reporting less than $10,000 in income annually.

The Psychology internship program at the West Los Angeles VA Healthcare Center has been accredited by the American Psychological Association since 1979. Of the 65 clinical psychologists on staff at WLA, 29 provide clinical supervision in the internship training program. All psychologists on staff are licensed, are from APA-accredited doctoral programs in clinical or counseling psychology and have completed an APA-accredited doctoral internship. Many hold clinical and academic appointments at local institutions, including the University of California, Los Angeles, the University of Southern California and Fuller Graduate School of Psychology. Psychologists at the West Los Angeles VA occupy a variety of roles in both inpatient and outpatient medical and mental health settings, with several staff members involved in program leadership positions and the majority working in interdisciplinary or interprofessional settings with allied mental health care professionals. Supervisors represent a wide range of theoretical orientations, including cognitive-behavioral, behavioral, integrative and psychodynamic.

In addition to the clinical internship, the Psychology training program provides training for 4-8 practicum students each year, most of whom are from local doctoral programs. In addition, we have 9 postdoctoral residents in eight clinical specialty or emphasis areas: Gero/Neuropsychology, Polytrauma/Rehabilitation Neuropsychology, General Neuropsychology, Health Psychology, Interprofessional Integrative Health (2 positions), Substance Use Disorders/Homeless Mental Health, Geropsychology, and Trauma. Interns will have the opportunity to work closely with practicum students and residents depending on their rotations.

**The Program’s Response To COVID-19**

Our Psychology interns and residents transitioned to telehealth/telework just after the Stay-at-Home order was announced by the governor of California in mid-March of 2020. This occurred with the full support of our Medical Center, Education Office, and Mental Health leadership. Our overall goal has been to provide the highest quality training while ensuring safe and effective patient care. We have worked diligently to maintain as many training activities as possible without significant disruption while ensuring that all program requirements were being met. At present, all of our interns see Veterans exclusively via telehealth modalities (video and telephonic) for individual therapy and assessment and attend didactics and clinical supervision via videoconferencing technologies. All of our trainees have been granted permission to telework and also have the option to report in person should they wish to do so.

These changes may continue to impact training during the 2021-22 training year. In accordance with guiding principles provided by VHA, the VA Greater Los Angeles Medical Center, APPIC and APA, our program will continue to prioritize the health and safety of trainees, Veterans and staff, and provide training that meets accreditation standards and enables interns to receive training in all profession-wide competencies. We will update our public materials when we have more information about what we can expect for the 2021-2022 training year.
Training Model and Program Philosophy

The aim of the Psychology internship program at the West Los Angeles VA Healthcare Center is to prepare interns for successful entry into postdoctoral or entry-level professional positions, particularly in VA Medical Centers, academic medical centers or academic departments of psychology, and eventual licensure. The program supports the Department of Veteran's Affairs mission to train professionals who will become members of the VA workforce as well as serve the health care needs of the nation as a whole. Our expectation is that our graduates will become licensed psychologists.

The internship program provides broad and general training based on the scientist-practitioner model. Our primary goal is to develop an intern's general knowledge, skills, values and attitudes through direct supervised patient care, supplemented by didactic seminars and participation in clinical research or other scholarly activity. Our goal is to provide each intern with a broad range of training experiences in assessment, intervention and consultation with a wide range of patients in medical and mental health settings. We believe that breadth of training is essential in developing well-rounded psychologists who will advance the field through professional practice, education, research and leadership roles.

The core concept of our internship is the understanding and application of scientific research to the practice of clinical psychology. The internship promotes development of critical thinking skills that are essential to evaluating the research literature, implementing treatments, assessing outcomes and investigating questions that enhance our knowledge and effectiveness. Our program's emphasis on the application of current scientific knowledge to professional delivery of services is reflected in the content of internship training activities. These activities include training in evidence-based psychological treatments, completion of a research project and didactics offered through the VA and outside resources. While we place a strong emphasis on practice informed by the science of psychology, our goal is for interns to develop the knowledge and skills that enable them to apply psychological theory, science and technique in a flexible manner to meet the diverse needs of the patient.

The internship is training-focused. While interns will spend the majority of their time in direct patient care activities, the intern's training goals are of primary importance and take precedence over workload demands. Interns are active participants in their own training. The transitional year from academic training to professional practice provides the opportunity for interns to develop their own interests and ideas within the structure provided by the program. We work collaboratively with each intern to develop an individualized, balanced program both within and across rotations that supplements the trainee's prior clinical experiences, fits with the intern's interests and career goals and meets the goals of training. Interns take an active role in selecting their rotations, planning didactics and participating in program evaluation and development.

The program employs a developmental model of training. Training experiences are designed to provide more intensive supervision at the outset of the internship and at the beginning of each new rotation, with the goal of increasing the interns' independence and ability to manage increasingly complex situations as their knowledge and skills develop. By the completion of internship, our expectation is that interns will be well prepared to function at a sufficiently autonomous level required for a postdoctoral residency or entry-level position.

The internship values the development of strong collaborative relationships with other professionals. As a program within a large, integrated health care system, training experiences are designed to promote interdisciplinary alliances. Interns have multiple opportunities to develop and expand their professional role, develop strong working relationships with other health care professionals and contribute meaningfully to the overall medical and mental health of the patient.

Psychologists must be trained to meet the needs of an increasingly diverse population. Awareness and understanding of diversity and individual differences are crucial to professional development, practice and research, and we strive to integrate these into every aspect of our training program, including intern recruitment, supervised clinical experiences, didactics and clinical research. Our model for practicing
diversity includes awareness of one’s own beliefs, assumptions, values and socio-cultural identity, awareness of and sensitivity to others’, and a working understanding of how these intersect in the therapeutic relationship and institutional environment.

Training in clinical supervision is an essential component of professional development as a psychologist. Psychologists must be prepared to train the next generation of practitioners using a competency-based approach informed by science. Supervision training involves the development of competence in providing supervision and mentorship to others, as well as evaluation of one’s own skills, values and attitudes. Diversity competence is considered integral to ethical and effective supervision practice.

The internship promotes the growth of professional development and identity through self-reflection, a collaborative approach to supervision, professional role modeling, promotion of lifelong learning, and exposure to diverse clinical experiences, patients and approaches. Through the course of the internship year, our goal is for interns to integrate the highest standards and values of the profession, including ethical practice, sound judgment and effective and compassionate patient care.

Program Competencies

The APA Commission on Accreditation requires that all trainees in APA accredited programs develop specific competencies as part of their preparation for practice in health service psychology. Interns must demonstrate competence in the following nine profession wide competencies. Interns are expected to demonstrate growing independence and the ability to manage increasingly complex situations as the training year progresses.

I. Research
Interns will demonstrate proficiency in the ability to critically evaluate the clinical research literature, integrate the scientific literature into clinical practice and demonstrate competency in conducting and disseminating clinical research. They will apply clinical research findings to clinical decision making, complete a clinical research or other scholarly project during the internship year, present ongoing research at the Intern Seminar, and attend seminars and workshops on evidence-based treatments and clinical research topics.

II. Ethical and Legal Standards
Interns will demonstrate ethical conduct and knowledge and application of professional ethics, laws, regulations, standards and guidelines governing health service psychology in all professional activities. They will recognize ethical dilemmas when they arise and take appropriate measures to resolve them based on a well-reasoned ethical decision-making process. Interns will gain experience and proficiency through supervised clinical experience and formal educational training in professional and ethical standards.

III. Individual and Cultural Diversity
Interns will understand and apply knowledge of individual and cultural diversity to psychological assessment, treatment, consultation, supervision and clinical research. Diversity competency includes awareness and understanding of self and others of cultural beings and the ability to work effectively with others who possess differing or conflictual worldviews. Interns are expected to apply a framework for working effectively with individual and cultural diversity. Competency is developed through didactics and supervised clinical experience with diverse individuals.

IV. Professional Values, Attitudes, and Behaviors
Interns will conduct themselves in ways that reflect the values and attitudes of the profession, including integrity, deportment, professional identity, accountability and concern for the welfare of others. They will demonstrate openness and responsiveness to supervision and feedback and an attitude of lifelong learning. Interns will engage in accurate self-reflection regarding their own personal and professional
functioning, engage in activities to enhance effectiveness and well-being, and intervene when disruptions occur.

V. Communication and Interpersonal Skills
Interns are expected to maintain effective and respectful relationships with patients, peers, staff, supervisors, supervisees and professionals from other disciplines. They will demonstrate the ability to effectively negotiate conflictual, difficult, and complex situations and relationships, including those involving individuals and groups different from oneself. Interns will demonstrate a thorough understanding of professional language and concepts and be able to communicate in a manner that is informative, clear and well-integrated.

VI. Assessment
Interns will demonstrate knowledge and skills in evidence-based psychological assessment in a variety of inpatient and outpatient medical and mental health settings. They will select methods and measures appropriate to the referral question, context, identified goals and diversity characteristics. Conceptualization, diagnosis and recommendations will be supported by evaluation methods and objective findings, and are informed by the research literature as well as professional standards and guidelines. Interns will demonstrate the ability to communicate findings and recommendations in an accurate, effective manner that is sensitive to a range of audiences.

VII. Intervention
Interns will demonstrate competency in providing evidence-based individual and group interventions across a variety of settings. They will demonstrate appropriate and therapeutic interpersonal qualities with a diverse patient population and establish and maintain an effective therapeutic alliance. Interns will demonstrate the ability to develop an intervention plan that is informed by assessment findings, therapeutic goals, context, diversity characteristics and the scientific literature. They will evaluate treatment effectiveness using appropriate methods or measures, and modify the approach accordingly. Interns will demonstrate flexibility and skill in modifying the approach when a clear evidence-base is lacking.

VIII. Supervision
Interns will demonstrate effective knowledge and application of supervision models and practices that are informed by the research literature. They will effectively incorporate awareness and knowledge of ethical and legal issues, diversity factors and supervisory role into practice. Interns will competently apply their knowledge in direct or simulated practice with psychology trainees or other health professionals.

IX. Consulation and Interprofessional/Interdisciplinary Skills
Interns will demonstrate the ability to function effectively as a member of an interprofessional or interdisciplinary team. This includes the understanding of and appreciation for the roles and perspectives of self and others, development of effective collaborative relationships, provision of meaningful, understandable feedback and the ability to effectively address the consultation question.

Interns are formally evaluated on these nine competencies at the end of each rotation. The formal research project evaluation occurs at midyear and upon completion of the project. In addition to these nine profession wide competencies, each rotation has specific goals and requirements.
Program Structure

CLINICAL TRACKS

We currently have eight funded intern positions; of these, five positions are in the General Track and three are in the Geropsychology Track.

The Geropsychology Programs at the West Los Angeles VA Healthcare Center are supported by three specially designated training stipends that are awarded each year by the Department of Veterans Affairs. These stipends are awarded with the intent of training well-rounded clinical psychologists who also have special interest and expertise in working with older adults. The overall philosophy of this program is to train psychology interns in a biopsychosocial approach to aging. While the primary emphasis of training is on the clinical aspects of aging, developmental and normative aspects are also covered. Interns completing the Geropsychology Track will be well prepared for competitive postdoctoral residency positions in geropsychology and/or clinical neuropsychology. A number of our geropsychology interns have also gone on to postdoctoral training and careers in Health Psychology/Primary Care and Rehabilitation Psychology.

Interns in the Geropsychology Program are required to complete two of their four rotations in geriatrics: Geriatric Medicine and Geropsychology/Community Living Center. While all interns who are supported by geropsychology-designated training funds are required to complete two rotations in geriatrics, these rotations are also open to interns in the General Track.

CLINICAL ROTATIONS

Interns complete four 13-week rotations that are selected on the basis of interest, prior clinical experiences and training goals. Rotations are selected to provide a breadth of clinical experience in inpatient and outpatient mental health and medical settings. By the end of the year, interns are expected to have gained experience in assessment, treatment and consultation in varied settings with a wide variety of patient populations.

Interns are asked to indicate their preferences for rotations prior to the start of the internship year. The Director of Training reviews and discusses these preferences with each intern to ensure a balanced training plan that supplements the student’s prior clinical experiences, fits with the intern’s interests, addresses gaps in training and meets the goals of training. The Training Program attempts to honor rotation choices within constraints of the program, such as demand for certain rotations. Interns typically receive their top three and often their top four rotation choices.

One of our eight internship positions is funded for treatment of substance use disorders (SUD), which requires that that one intern be placed in the SUD rotation each quarter. Because SUD is a popular rotation, it is likely that all rotation slots will be filled on the basis of intern interest. However, should any slots go unfilled, an intern who has not selected SUD as one of their top four rotation choices may be placed on this rotation.

Interns spend the majority of their time in direct patient care activities, including assessment, individual and group psychotherapy, consultation, supervision, case conferences, interprofessional/interdisciplinary treatment team conferences and clinical support activities (chart review, writing notes).

YEAR-LONG PSYCHOTHERAPY PLACEMENT

The psychotherapy placement is designed to provide interns with a more intensive training experience within a particular treatment model or orientation with patients who present with more complex problems. Interns are required to treat two ongoing patients during the year. A single “case” may be year-long treatment of one individual, an ongoing group or a series of individual patients who may benefit from more prolonged but not year-long treatment. At the beginning of the year interns meet with the Director of
Training, who selects a supervisor based on the trainee’s interests, theoretical orientation and training needs. Interns are required to video- or audiotape their psychotherapy sessions.

**CLINICAL SUPERVISION**

Interns may have anywhere from one to four supervisors per rotation. They receive a minimum of four hours of supervision per week, at least two hours of which are in individual face-to-face supervision. Interns have the opportunity to observe supervisors during evaluations and assessment in many settings, especially at the outset of the rotation, and frequently serve as co-facilitators for group interventions. Supervisors represent a wide range of theoretical orientations, including cognitive-behavioral, behavioral, integrative, and psychodynamic. The Psychology staff is diverse in terms of ethnicity, cultural background, gender and professional and personal interests.

**OPPORTUNITIES TO CONDUCT SUPERVISION**

Interns have the opportunity to supervise pre-intern psychology trainees depending on where pre-interns are placed in any given year. Supervision opportunities have typically occurred on the Geropsychology, Mental Health Clinic and Rehabilitation Psychology rotations. Supervision opportunities may also be available on the Trauma rotation.

**DIRECT OBSERVATION**

Consistent with APA requirements for internship training, intern competency evaluations are based in part on direct observation of practice on all rotations during each evaluation period. In most cases this will involve in-room observation or co-facilitation of an intake interview, assessment, or group intervention. Observation of individual interventions occurs through audio or video recording of sessions.

**DIDACTICS**

The Internship Program offers five required seminars: the weekly Intern Seminar, the weekly Assessment Seminar, a twice-monthly Diversity Seminar, a monthly seminar on Clinical Supervision and a monthly seminar on Evidence-based Psychotherapy. The monthly Geropsychology Journal Club is required for interns in the General Track and optional for those in the General Track. The Health Psychology Journal Club is required for interns on the Behavioral Health rotation and optional for all others. The GLA Trauma Psychology seminar is required for interns on the Trauma rotation and optional for all others.

*The General Intern Seminar* meets every Wednesday afternoon and covers a wide range of topics, including law and ethics, assessment of risk, the Veteran population, professional development, intervention, program evaluation and other topics relevant to treatment of the Veteran population. The Director of Training schedules the seminar and welcomes ideas from interns on topics of interest. Interns are required to make one presentation at the Intern Seminar, which will focus on dissertation research or research conducted during the internship year. General meetings are scheduled on a regular basis and provide the intern class with the opportunity to discuss any areas of concern or topics of interest with the Director of Training.

*The Assessment Seminar* meets every Wednesday afternoon. The seminar is facilitated by Dr. Ahoo Karimian with assistance from other training faculty and outside speakers with specialized psychological and neuropsychological assessment experience. The seminar is designed to enhance foundational skills in personality and psychodiagnostic assessment, neuropsychological evaluation, and other specialized areas such as violence risk, trauma, sexual health, pain and organ transplant. Coverage of psychodiagnostic assessment will focus on the MMPI-2 and MMPI-2-RF and include case presentations and group discussion. Topics in neuropsychological assessment include diagnostic decision making, capacity evaluations, functional neuroanatomy, and telehealth. Cutting across all lectures will be a focus on how clinical research informs the assessment process.
**The Clinical Supervision Seminar**, led by Dr. Okonek, meets monthly and is designed to provide interns with training in evidence-based supervision practice. Seminars include formal didactic presentations, assigned readings, exercises, case discussions, self-assessments, and role-plays, with an emphasis on experiential learning. Topics include APA Guidelines for Clinical Supervision, models and theories of supervision, roles and responsibilities, the supervisory relationship, legal and ethical issues, diversity, reflective practice and evaluation and feedback.

**The Diversity Seminar**, led by Drs. Anjuli Amin and Yong Song, meets with the overarching goal of increasing trainees’ cultural competence. At the core of the training is examining various dimensions of our cultural selves as we intersect with the dimensions of cultural others. We use this understanding to inform our clinical interpretations, treatment goals and relationships with our clients. To achieve these objectives, we use case discussions, didactic presentations and experiential practice. Guest lecturers are invited to speak on topics of relevance to our clinical population, or other areas of interest as identified by the trainees. Interns will provide culturally formulated case presentations using the DSM 5 Cultural Formulation as a framework, with our postdoctoral residents contributing to teaching by serving as case consultants and discussants. The seminar meets twice monthly. Handouts and resources are provided.

**The Evidence-Based Psychotherapy Seminar**, facilitated by Dr. Okonek, meets monthly and features a variety of guest speakers discussing state-of-the-art evidence-based interventions relevant to the VA setting. Topics have included Acceptance and Commitment Therapy, CBT for Psychosis, CBT for Pain, Cognitive Processing Therapy, Prolonged Exposure, Integrative Behavioral Couple Therapy, Mindfulness-Based Intervention, CBT for Insomnia and Motivational Interviewing. The seminar format includes formal didactics and group discussion.

**The Geropsychology Journal Club**, led by Drs. Sheryl Osato and Rebecca Melrose, is a monthly didactic required for Geropsychology trainees, as well as for any trainee interested in learning more about the unique complexities of working with the geriatric population. Each month, supervisors and trainees will meet to discuss 1-2 research articles on a specified topic in Geropsychology. Topics covered will include psychotherapy with older adults, successful aging/promoting cognitive health, caregiver support, the 3 D’s (depression, dementia, and delirium), mild cognitive impairment, professional development in Geropsychology, and the ABPP process, as well as various other topics based on training needs.

**The Health Psychology Journal Club**, coordinated by Dr. Megan Taylor-Ford, is a monthly didactic attended by behavioral medicine staff, behavioral medicine trainees (pre-interns, interns, and postdoctoral residents), as well as any trainee interested in learning more about topics in health psychology and behavioral medicine. Each month, one staff member or trainee leads the group in a lively discussion of a recent research article of their choice, selected from the broad field of health psychology.

**The GLA Trauma Psychology Seminar**, facilitated by Drs. Rosy Benedicto and Christina Robinson, is a virtual weekly didactic attended by Trauma Recovery Services staff and trainees (pre-interns, interns and postdoctoral residents) across all of GLA who are interested in the assessment and treatment of PTSD. The seminar, which is led by a variety of guest speakers, focuses on increasing understanding of trauma/PTSD, reviewing evidence-based approaches for assessing and treating PTSD, examining both practical and theoretical issues in the treatment of PTSD and discussing emerging new knowledge in the field of trauma psychology. It also includes case discussions and consultation.

There are many other educational opportunities available during the internship year. These include GRECC-sponsored programs and conferences, continuing education programs sponsored by the Psychology Department, the Neurobehavior Seminar, a weekly Pain Lecture Series, rotation-specific case conferences, GLA-sponsored events, UCLA Semel Institute for Neuroscience and Human Behavior Grand Rounds (http://www.psychiatrygrandrounds.com/) and many programs and lectures in the community. Attendance at optional educational activities is at the discretion of the Training Director and rotation supervisor(s).
DIVERSITY COMMITTEE

The GLA Psychology Department has an active Psychology Diversity Committee. The Committee’s mission is “to create a willing community of fellow staff members and trainees to learn from one another’s life experiences, to advocate for inclusion, to celebrate all cultures and identities, and to promote equity in access to opportunity. We strive to extend these values to the services and care we offer to Veterans.” The Committee meets monthly with the goal of enhancing diversity awareness, providing education and creating a welcoming and inclusive community. Recent Committee initiatives include organizing monthly brown bag meetings, conducting celebratory activities and addressing needs related to staff hiring. Trainees are recruited and invited to join specific initiatives and work closely with the staff members to gain experience in the celebration and expansion of diversity in the VA workplace.

RESEARCH

Our internship is based on the scientist-practitioner model and stresses the contribution of research to clinical practice. The West Los Angeles VA Healthcare Center is a major research facility and has excellent resources for basic and clinical research.

All interns are required to complete a research or other scholarly project during internship. The goal is to demonstrate research competency through development and completion of a project relevant to the intern’s interests and/or career goals. The project may consist of involvement in an ongoing research study, or engagement in other scholarly activities such as conducting a program evaluation, case study, critical literature review, theoretical paper or other approved activity. Interns are required to produce a formal written report in manuscript format. Work must reflect the intern’s independent ability to critically evaluate and disseminate research or other scholarly work. Interns work with the Director of Training to find a research preceptor. In most cases, interns work with one of their supervisors as a part of an ongoing clinical research project or program evaluation. Interns are required to submit a research proposal at midyear and a written summary of their work at the end of the year. The formal research project evaluation occurs at midyear and upon completion of the project.

Examples of recent projects include:

- Volunteering as an Adjunctive Program for Veterans with Substance Abuse Disorders
- Developing and Implementing a Bystander Intervention Program to Reduce Sexual Harassment Among Veterans in a Mental Health Residential Treatment Program
- Effects of “Gerofit” on Physical, Cognitive and Emotional Health
- The Relation Between Pain and Emotions: A Systems Perspective
- Associations of Baseline Working Memory Task-Postive Network Activity to Mild Cognitive Impairment Disease Progression
- The Relationship Between White Matter Integrity and fMRI Activation During a Reasoning Task Among Cognitively Healthy and Mildly Cognitive Impaired Older Adults
- Cultural Considerations in CPT and PE and Implications for Clinical Practice: A Narrative Review
- The Comprehensive Pain Rehabilitation Program: An Examination of Treatment Completers and Non-completers
- Reliability and Validity of the Biopsychosocial Spiritual Scale in Veterans
- Emotional Awareness and Expression Therapy or Cognitive Behavior Therapy for the Treatment of Chronic Musculoskeletal Pain in Older Veterans: A Pilot Randomized Clinical Trial
- Barriers to Health Behavior Change in Veterans participating in a Cardiac Rehabilitation Program
- Cerebral Metabolic Correlates of Disorientation in Alzheimer’s Disease
- Cognitive Decline and Exacerbation of PTSD Symptoms in Older Adults: A Case Report
- Pain-related Outcomes in Brief vs. Comprehensive Interdisciplinary Pain Interventions
- The Role of Independence Centrality on the Health of Veterans with Chronic Pain
- Improving Community Integration of Homeless Veteran Families Through Adapting a Resiliency Intervention
Interns are required to present a current research project in the Intern Seminar. This can be dissertation research, the internship project, or any other ongoing clinical research.

Interns are allotted a maximum of four hours of research time per week. While completion of the VA research project is to be the primary use of the intern’s research time, research hours may also be used for any outside research, including completion of the dissertation, preparation of manuscripts or presentations or work on other research projects. Research hours must be taken on site.

**EVALUATION**

The Internship Program strongly promotes ongoing feedback between interns, supervisors and the Training Committee. Supervisors complete written competency-based evaluations at the end of each rotation, with the expectation that feedback is an ongoing process throughout the rotation. These evaluations serve as a tool to encourage communication, identify strengths and weaknesses, and set goals for training. Interns are required to complete quarterly evaluations of their supervisors and of their rotations. Psychotherapy placement supervisors perform written evaluations at midyear and at the end of internship. Interns complete evaluations of their psychotherapy supervisors on the same schedule. Research preceptors and interns perform written evaluations at midyear and upon completion of the research project. Interns are evaluated on their supervision competency at midyear and at the end of the year based on their performance in the Clinical Supervision Seminar. In addition, rotation supervisors evaluate interns on their supervision competency if this training activity is available on the rotation.

Interns are required to complete a formal self-assessment at the outset of training and again at midyear. This process is intended to promote self-reflective practice, identify areas that may require more focused training, and develop goals for the training year.

Written feedback on the intern’s performance is provided to his or her Director of Clinical Training at midyear and at the completion of internship.

We value programmatic feedback from interns. Interns meet as a group with the Director of Training on a regular basis to discuss any problems, concerns or suggestions for program development and improvement. In addition, intern representatives participate in monthly Training Committee meetings, which offers interns the opportunity to express any concerns in addition to providing input on program improvement. Interns complete a formal program evaluation at the completion of the year.

Our goal is to provide a successful and rewarding internship experience for all of our trainees. We work closely with interns to tailor the internship to individual interests, needs for training and career goals.
REQUIREMENTS FOR COMPLETION

In order to maintain good standing in the program, interns must:

1. Abide by the APA Ethical Principles and Code of Conduct and all VA policies, rules, and regulations.

2. Obtain an average rating of "3" (Fully Satisfactory/Intern Level) or higher in each of the nine profession wide competencies on all 1st through 3rd quarter evaluations, with no areas requiring remediation.

3. Attend required seminars and Psychology Department workshops. In addition, interns must attend educational activities required on their rotations.

4. Meet all administrative requirements.

Criteria for Successful completion of internship:

1. Completion of 2080 hours of supervised professional experience, to be completed in one year of full-time training

2. Average rating of "2" (Semi-autonomous/Exit Level) or higher in each profession wide competency on all final evaluations, with no areas requiring improvement or remediation

3. Interns must complete a research requirement and submit a written summary of their project to the Psychology Training Committee at least one month prior to the completion of internship. Project evaluations must meet the criterion listed above.
Training Experiences

CLINICAL ROTATIONS

There are 9 clinical rotations offered to Psychology interns.

1. BEHAVIORAL HEALTH

The Behavioral Health rotation provides training in consultation, assessment, education and intervention within integrated primary health care settings. Interns on this rotation serve as integral members of the various interdisciplinary and interprofessional health care teams, providing direct patient care, consultation, and treatment planning.

On this rotation, interns have the opportunity to participate in a variety of training experiences. Some common key skills emphasized across settings include interdisciplinary team participation and focused assessment and intervention skills. Assessment is one critical area of medical consultation, as the consulting psychologist is often relied upon to provide the medical team with an evaluation of a patient’s adjustment, potential difficulties with medical interventions, compliance with treatment and suggestions for how medical interventions should be tailored to the individual patient. In Primary Care – Mental Health Integration (PCMHI), interns receive training in interviewing techniques and perform brief intakes. Additionally, interns complement their assessment training with experiences providing health-related group and individual interventions that target key aspects of health psychology including the bidirectional relationship between stress/mood and illness, education and health promotion activities, and evidence-based practices to enhance motivation for health behavior changes.

We recognize that many psychology interns have little prior experience working in a medical setting and we therefore emphasize close supervision and an "open door" approach to supervisor availability. We work jointly with interns to model and observe assessment and intervention skills.

1. Health Promotion/Disease Prevention (HPDP) (Dr. Taylor-Ford)

Interns are required to participate in training opportunities within the HPDP program, including the MOVE Clinic, Quit Smoking, and Cardiopulmonary Rehabilitation Programs.

- **MOVE Clinic:** This is a nationwide, interprofessional VA program designed to treat obesity. Interns participate in structured classes, teach behavior change skills for weight loss, and provide individual counseling for weight management (when cases are available).

- **Quit Smoking Program:** The Quit Smoking program is an interdisciplinary program that uses behaviorally focused treatment in combination with pharmacotherapy to help Veterans reduce their tobacco use and become non-smokers. Interns participate in groups that include educational and support components as well as individual sessions that use a Motivational Interviewing approach.

- **Cardiopulmonary Rehabilitation:** The Cardiopulmonary Rehab Program enrolls Veterans with cardiac or lung health conditions. In the program, veterans participate in regular supervised exercise to improve heart and lung functioning and quality of life. In addition, Veterans participate in psychoeducation programming that addresses relevant psychological topics in the context of chronic heart and lung disease including hostile personality, depression, stress and sympathetic nervous system activation, values in the context of chronic illness, goal setting, and healthy behavior change. Interns participate in these educational interventions and also facilitate
interventions focused on emotional processing of and effective coping with cardiopulmonary illness.

2. Primary Care-Mental Health Integration (PC-MHI) (Drs. Chen and McGowan): PC-MHI provides co-located, population-based and measurement-based mental and behavioral health care services for Veterans in collaboration with the primary care team (Patient Aligned Care Team; PACT). PC-MHI consultations include both assessment and treatment, and referrals may come from any PACT staff (e.g., physicians, nurse practitioners, social workers, dieticians, health coaches, nurses). Our PC-MHI team, which includes psychology, psychiatry, and nursing staff, collaborates to help triage and meet the mental and behavioral health needs of patients with generally mild to moderate concerns including depression, anxiety, PTSD, chronic illness/multiple medical problems, insomnia, pain disorders and substance abuse. Decisions to refer to specialty mental health clinics may be made for individuals with more severe or complex mental health conditions. This is a fast-paced clinical setting in which diagnostic, crisis intervention, quick rapport-building, flexible decision-making and motivational-interviewing skills can be honed, particularly as many individuals seen in PC-MHI are new to mental health.

PC-MHI activities include:
- Scheduled initial intake evaluations (1-2 brief functional assessments per week)
- Short-term and brief individual therapy interventions (4-6 weeks, 30 min. visits, 2-3 cases per week)
- Weekly PC-MHI team meetings that include case presentations, didactics, and programmatic discussions (Tuesdays 1pm - 2pm)
- Individual supervision (Tuesdays 10:30-11:30am)
- Weekly group supervision with the postdoctoral fellow (Tuesdays 11:30-12pm)
- Shadow supervisor in same day, open access visits with opportunity to conduct visits later in the rotation

When COVID-19 restrictions are in place, all activities on the Behavioral Health rotation are performed via telehealth platforms (either video or audio visits). There services can be provided by trainees either from offices at the VA or through teleworking arrangements. Supervision is provided through videoconferencing platforms.

Weekly scheduled activities include:

*Sarah Kate McGowan, Ph.D.*

### 2. THE DOMICILIARY RESIDENTIAL REHABILITATION AND TREATMENT PROGRAM

The Domiciliary Residential Rehabilitation and Treatment Program (DRRTP) is a 296-bed residential facility for veterans with complex substance use, psychiatric and psychosocial needs. The program is based on a holistic, person-centered and recovery-oriented approach to wellness that promotes mental and physical health. There are a broad range of services provided at the DRRTP, including individual and group psychotherapy, social work support, in-house medical and psychiatric care, recreation therapy, vocational rehabilitation and peer support. The goal of Domiciliary treatment is to help Veterans develop and maintain sobriety, improve emotional and physical health, increase social support, identify and pursue personal goals and values and ultimately reintegrate into the community as independent and productive members of society.

The DRRTP is comprised of several distinct treatment tracks, each with approximately 45-60 beds each (Substance Use Disorder (SUD)/Homeless, SUD, SUD/Serious Mental Illness, Combat Trauma, Detox, and Women’s Track). Each track is staffed by a team of providers including psychologists, social workers, addiction therapists, social science technicians, vocational rehab specialists, recreation therapists, chaplains and peer support specialists. Psychologists serve as the team leaders for the treatment tracks and manage program development, provide individual and group psychotherapy, conduct psychodiagnostic intakes and personality assessments, respond to crisis situations and screen patients for possible admission to the Domiciliary. Interns at the DRRTP will work on the SUD/Homelessness track and work closely with the two team leads, but may also have the opportunity to collaborate on groups or individual therapy cases from other tracks. Thus, the training experience is flexible and diverse, and interns have the opportunity not only to develop and solidify psychotherapy and assessment skills but also to gain valuable experience in the areas of program development and interdisciplinary leadership and collaboration.
In general, each week interns conduct two psychodiagnostic intake assessments, lead or co-lead 2-3 groups, carry 2-3 individual cases and attend several team and community milieu meetings. Interns have the opportunity to lead a variety of groups including Seeking Safety, Acceptance and Commitment Therapy (ACT), Dialectical Behavior Therapy (DBT), mindfulness, Whole Health and other cognitive-behavior and emotions management groups. Individual therapy opportunities include Cognitive Processing Therapy, ACT, Motivational Interviewing (MI), DBT and integrative emotion-focused approaches.

When COVID-19 precautions are in place, training opportunities occur over VA Video Connect (VVC) or telephone. Supervision is conducted via videoconferencing platforms.

A typical week may include the following activities:

<table>

**GOALS**

**I. Research.** Interns will demonstrate proficiency in evaluating clinical research and integrating research into clinical practice, particularly in the area of residential substance use and mental health treatment.

**II. Ethical and Legal Standards.** Interns will demonstrate appropriate ethical knowledge and conduct based on professional principles and standards and will seek supervision/consultation when indicated.

**III. Individual and Cultural Diversity.** Interns will demonstrate knowledge of individual and cultural diversity and apply this to assessment, treatment and interdisciplinary collaboration.

**IV. Professional Values, Attitudes, and Behaviors.** Interns’ behavior will reflect values and attitudes of the profession, including integrity, accountability, respect and beneficence.

**REQUIREMENTS**

1. Review and discuss literature in supervision.
2. Review and discuss the evidence base for specific treatments used at the DRRTP (e.g., Seeking Safety, Motivational Interviewing, CPT).
3. Gain experience with at least two evidence-based treatments.

1. Discuss ethical/clinical issues in supervision.
2. Participate in treatment team meetings and case conferences during which challenging ethical and clinical issues are discussed.
3. Coordinate with other members of the treatment team to resolve difficult ethical issues.

1. Discuss diversity issues during supervision and treatment team meetings.
2. Conduct assessments and deliver interventions with sensitivity to diversity issues, particularly race, ethnicity, gender, spirituality and homelessness.

1. Discuss professionalism in supervision.
2. Demonstrate professional behavior with staff and patients.
3. Participate in interdisciplinary team meetings.
V. Communication and Interpersonal Skills.
Interns are expected to maintain respectful relationships with patients, peers, staff and supervisors and demonstrate the ability to work effectively with providers from other disciplines.

1. Participate actively in treatment team meetings and communicate effectively with other members of the team regarding specific patients/issues.
2. Discuss interdisciplinary team dynamics and challenges during supervision.

VI. Assessment. Interns will conduct thorough psychodiagnostic and psychological evaluations, develop realistic treatment plans based on these evaluations, and effectively communicate findings to patients and interdisciplinary providers both in person and via written documentation.

1. Conduct 15-20 psychodiagnostic intake assessments and present findings and initial treatment plan in interdisciplinary team meetings.
2. Conduct 1-2 comprehensive evidence-based psychological assessments.
3. Discuss assessments during supervision.

VII. Intervention. Interns will competently deliver evidence-based interventions, including individual and group interventions for patients with a history of substance use disorders and trauma.

1. Provide evidence-based individual therapy for 3 Veterans.
2. Lead 2-3 evidence-based groups per week.
3. Develop and implement crisis intervention techniques.

IX. Interprofessional/Interdisciplinary Skills. Interns will demonstrate the ability to collaborate effectively with providers from other disciplines, including psychiatry, social work, medicine, peer support, addiction therapy, recreation therapy, vocational rehab and building management.

1. Participate actively in treatment team meetings and communicate effectively with other members of the team regarding specific patients/issues.
2. In supervision, discuss how clinical perspectives differ across members of the team and benefits as well as challenges of interdisciplinary teamwork.

**Domiciliary Supervisors**
Wes Cook, Psy.D.
Rubin Khoddam, Ph.D. (Primary Supervisor)
Jackie Spezze, Psy.D. (Primary Supervisor)

---

**3. GERIATRIC MEDICINE ROTATION**
(BUSY GERIATRIC TEAM & GERIATRIC MEDICINE OUTPATIENT CLINIC/GERCC, HOME BASED PRIMARY CARE)

The Geriatric Medicine rotation provides training in neuropsychological and psychological assessment, brief psychotherapy, and team consultation in both inpatient (Acute Geriatric Team) and outpatient (GRECC outpatient clinic and Home Based Primary Care) medical geriatric settings. The program is linked with the UCLA Geriatric Medicine Fellowship, one of the top rated geriatric training sites in the country. Please see their website for additional information at [https://www.uclahealth.org/geriatrics/fellowship/overview](https://www.uclahealth.org/geriatrics/fellowship/overview)

The Acute Geriatric Team (AGT) oversees 16 inpatient beds for medically ill older Veterans, located in the main hospital (Building 500). Interns are part of the interdisciplinary treatment team, which includes physicians, social workers, physical therapists, dieticians, optometrists, pharmacists and nurses. The intern is responsible for reviewing the medical charts of all AGT patients to detect risk factors for cognitive, psychological and functional decline. As needed, the intern assesses patients for medical decisional capacity, ability to live independently, delirium, dementia and other cognitive concerns. The intern also assesses for mood disorders, provides short-term supportive therapy or psychoeducation and
participates in family consultation and discharge planning. The intern provides training on cognitive screening and dementia diagnosis to the rotating medical residents. Because the AGT strives to discharge patients safely and efficiently, the pace is fast and there is a strong emphasis on team communication and collaboration. The intern functions as the face of Psychology on the AGT.

GRECC (Geriatric Research, Education, and Clinical Centers) is an outpatient clinic with a census of approximately 400 patients. Interns attend weekly didactics with the interdisciplinary medical treatment team and perform outpatient neuropsychological testing. Interns are involved in testing, treatment planning, feedback with patients and their families and consultation. Typical diagnoses include cerebrovascular disease, Alzheimer’s disease, Mild Cognitive Impairment and depression.

The Home Based Primary Care (HBPC) Psychologist works with an interdisciplinary primary care team that includes a physician, nurse practitioner, registered nurse, pharmacists, occupational therapist, dietitian, social worker, and trainees from multiple disciplines. HBPC staff provide comprehensive primary care services to veterans in their homes the veteran served by HBPC are older adults who have complex, chronic medical problems, many of whom have cognitive disorders and/or significant psychiatric disability. Psychologist responsibilities include psychiatric and cognitive assessments, including assessments of capacity for medical decision-making; therapeutic interventions with patients, family members, and assisted living staff; staff/team consultation; and team development. Presenting problems are varied and include depression and anxiety, coping with chronic illness, motivation/adherence issues, caregiver stress, and behavioral problems associated with cognitive disorders.

The intern will accompany the supervisor in a government car to the Veteran’s home to conduct assessments and interventions in HBPC. Supervision is done within a developmental model, such that trainees are given increasingly responsibility as their competency develops. Initially, interns will observe and be observed by the supervisor in the veteran’s home. As interns progress in their skills, the intern will conduct treatment without the supervisor present. However, the supervisor will be available in the vicinity of the actual visit. The intern will receive orientation and training in how to manage emergency situations and related HBPC policies and procedures prior to making a home visit.

The intern also co-facilitates one of two outpatient groups aimed at promoting cognition: one for healthy older adults (Brain Training), or one for Veterans with Mild Cognitive Impairment/mild dementia (Memory Group). The Brain Training group is a psychoeducational program for older adults aimed at enhancing healthy brain functioning as they age. Group sessions focus on teaching participants about factors that can impact cognition, including the normal aging processes, nutrition, exercise, stress and depression. Interns teach and assist participants in practicing mnemonic strategies and compensatory techniques to enhance their memory in daily life. The Memory Group follows a similar format, but is geared towards older adults who have been diagnosed with a neurocognitive disorder.

The GRECC team is active in research, with ongoing studies in the areas of tele-medicine, physical exercise and emotional and cognitive functioning and interventions to assist caregivers. Dr. Melrose has a VA funded Merit Review project to examine neuroimaging correlates of amnestic Mild Cognitive Impairment and Alzheimer’s Disease.

When COVID-19 precautions are in place, training opportunities occur over VA Video Connect (VVC) or telephone. Supervision is conducted via videoconferencing platforms.

<table>
<thead>
<tr>
<th>REQUIREMENTS</th>
</tr>
</thead>
</table>

**I. Research.** Interns will demonstrate proficiency in the ability to critically evaluate the clinical research literature, integrate the scientific literature into clinical practice, and demonstrate competency in clinical research as it pertains to geropsychology.

| 1. Participate in the Geropsychology Journal Club.  
2. Focused readings in geriatric psychology.  
3. Case review during supervision. |

**II. Ethical and Legal Standards.** Interns will demonstrate ethical conduct and knowledge and application of professional ethics, laws, and standards governing health service psychology in all professional activities related to geropsychology.

| 1. Case review during supervision, including identification of cases requiring Adult Protective Services reporting, capacity assessments, and involvement of legally authorized representatives in patient care decisions.  
2. Attend didactics on law and ethics throughout the year. |

**III. Individual and Cultural Diversity.** Interns will understand and apply knowledge of individual and cultural diversity to psychological assessment, treatment, consultation, supervision and clinical research, including how age, medical illness, physical disability and cognitive decline intersect with other aspects of diversity.

| 1. Case review during supervision.  
2. Attend presentations on cultural diversity throughout the year. |

**IV. Professional Values, Attitudes, and Behaviors.** Interns will conduct themselves in ways that reflect the values and attitudes of the profession, including integrity, deportment, professional identity, accountability and concern for the welfare of others.

| 1. Discussion of professionalism in supervision.  
2. Case review during supervision.  
3. Participation in interdisciplinary team discussions. |

**V. Communication and Interpersonal Skills.** Interns are expected to maintain effective and respectful relationships with patients, peers, staff, supervisors, supervisees and professionals from other disciplines.

| 1. Serve as the primary mental health consultant on the AGT.  
2. Discussion of communication during supervision. |

**VI. Assessment.** Interns will demonstrate knowledge and skills in evidence-based psychological assessment in a variety of inpatient and outpatient geriatric medical settings.

| 1. Administer and interpret at least 18 inpatient neurobehavior screening assessments.  
2. Administer and interpret one or more outpatient comprehensive neuropsychological batteries.  
3. Conduct inpatient capacity and psychodiagnostic assessments as needed. |
**VII. Intervention.** Interns will demonstrate competency in providing evidence-based individual and group interventions across a variety of settings with older adults.

1. Provide short-term psychotherapy to at least two older adults.
2. Provide brief therapy to inpatients.
3. Co-lead the Brain Training or Memory group.

**IX. Consultation and Interprofessional/Interdisciplinary Skills.** Interns will demonstrate the ability to function effectively as a member of an interdisciplinary team.

1. Serve as the primary mental health consultant on the AGT.
2. Participate in interdisciplinary treatment team meetings for the GRECC outpatient clinic.

---

**Geriatric Medicine Supervisors**

Fred Kornfeind, Psy.D.
Megan Johnson, Ph.D.
Rebecca Melrose, Ph.D.
Stacy Wilkins, Ph.D., APBB/CN (Primary Supervisor)

---

### 4. GEROPSYCHOLOGY / COMMUNITY LIVING CENTER (CLC) ROTATION

This rotation combines training in two different clinical settings, which are described below. Interns will spend approximately 50% time in each location.

**Geropsychology**

The Geropsychology portion of this rotation emphasizes clinical training in aging and mental health, and is supported through the GRECC training stipends. This rotation provides a full range of training experiences in psychiatric outpatient care for older adults. One of the primary training sites in this rotation is the Geropsychiatry Outpatient Clinic. This clinic provides longitudinal care for approximately 350 older Veterans. This interdisciplinary setting trains students from a variety of mental health and medical disciplines, including Geropsychology, Geriatric Psychiatry, Geriatric Medicine, Pharmacy and Social Work. Training occurs in a highly cohesive and collaborative atmosphere from subspecialty trained attending faculty. The primary supervisors on this rotation have received postdoctoral training in geriatrics and neuropsychology.

Interns have the opportunity to evaluate Veterans who have a variety of mental health disorders, including depression, anxiety, bipolar disorder, schizophrenia and neurocognitive disorders. Interns will learn about recently developed treatments for psychiatric illness and cognitive decline, including pharmacotherapies, psychotherapies and caregiver support. Evaluations are comprised of comprehensive psychiatric interviews, psychological assessment and neuropsychological assessment. Because many older Veterans have co-morbid medical and social disabilities, a broad biopsychosocial approach to care is used in these settings.

The majority of the attending (supervisory)-level geriatric psychiatry staff participate in clinical research and have academic appointments at UCLA. Current investigations include clinical trials of pharmacotherapy to treat agitation in Alzheimer’s Disease, and group therapy interventions to treat chronic pain in older Veterans.

When COVID-19 restrictions are in place, evaluations in the Geriatric Psychiatry Clinic are conducted remotely. Most of the evaluations are done over the telephone. However, some Veterans have
smartphones or tablets that allow them to be evaluated through a video connection. The CBT group for depression is conducted on a conference telephone call; this can be modified to video conferencing if all group members have access to smartphones and email accounts. Video teleconferencing is used for supervision as well as the Geropsychology Journal Club.

<table>
<thead>
<tr>
<th>GOALS</th>
<th>REQUIREMENTS</th>
</tr>
</thead>
</table>
| I. Research. Interns will be able to review the scientific literature in geropsychology, neuropsychology and aging critically. They will also be able to discuss and demonstrate how their knowledge of scientific literature can be applied and integrated into clinical practice. | 1. Discuss literature in Geropsychology during supervision, and how it applies to practice.  
2. Present relevant research findings on the neuropsychiatric aspects of aging in the Geropsychology Journal Club.  
3. Focused readings in geriatric psychology.  
4. Discuss dissertation findings in supervision. |
| II. Ethical and Legal Standards. Interns will demonstrate knowledge of ethical and legal standards in their clinical practice and decision making. | 1. Case discussion in supervision.  
2. Attend Law and Ethics didactics. |
| III. Individual and Cultural Diversity. Interns will demonstrate knowledge and awareness of how diversity affects their care and interactions with patients, and obtain a fundamental knowledge of how cultural and individual diversity impact the aging process. | 1. Case review in supervision.  
3. Focused readings. |
| IV. Professional Values, Attitudes, and Behaviors. Interns will demonstrate knowledge and behaviors that reflect the values of our discipline. This includes interactions within our discipline, as well as with other team members. | 1. Discussion of cases in supervision.  
2. Participation in interdisciplinary care and case discussions. |
| V. Communication and Interpersonal Skills. Interns are expected to maintain effective and respectful relationships with staff, colleagues and patients. They will be able to communicate their clinical findings clearly, in written and oral formats. | 1. Present cases to the interdisciplinary team.  
2. Provide feedback to the patient.  
| VI. Assessment. Interns will demonstrate knowledge and skills in evidence-based psychological assessment, psychiatric interviewing and cognitive evaluations in an outpatient setting. | 1. Conduct at least 20 psychiatric interviews.  
2. Administer and interpret brief cognitive and mood measures in longitudinal care. |
| VII. Intervention. Interns will demonstrate competency in providing evidence-based individual and group interventions across a variety of settings with older adults. | 1. Provide short-term psychotherapy to one older adult.  
2. Lead a CBT group for depression for older veterans. |
VIII. Supervision. Interns will demonstrate effective knowledge and application of supervision models and practices that are informed by the research literature.

1. Supervise one pre-intern.
2. Discuss this experience in supervision.
3. Attend Clinical Supervision seminar.

IX. Consultation and Interprofessional/Interdisciplinary Skills. Interns will demonstrate the ability to function effectively as a member of an interdisciplinary team.

1. Discuss cases with the interdisciplinary staff.
2. Provide treatment in an interdisciplinary setting.

Geropsychology Supervisor: Sheryl Osato, Ph.D. (Primary supervisor)

Long-Term Care and Rehabilitation (Community Living Center – CLC)

The Long-Term Care and Rehabilitation portion of this rotation emphasizes clinical training in aging and mental health in an extended care setting, and is supported through the GRECC training stipends. This setting provides a full range of training experiences in psychotherapy, behavioral intervention, group therapy, cognitive evaluations and interdisciplinary team work. While the focus is primarily on the treatment of older Veterans, there are also opportunities to work with younger patients who reside in the CLC for a variety of reasons, ranging from rehabilitation to palliative care. The CLC interdisciplinary setting trains students from a variety of mental health and medical disciplines, including Geropsychology, Geriatric Psychiatry, Geriatric Medicine, Pharmacy, Social Work and Nursing. Interns have the opportunity to work with patients who have a variety of mental health disorders, including mood disorders, schizophrenia, personality disorders, dementia and delirium. Training opportunities emphasize assessment (psychosocial and cognitive), individual and group psychotherapy and interdisciplinary team involvement. Individual psychotherapy is from a short-term model and utilizes CBT, MI, existential, third wave and supportive modalities. Interns are frequently asked to provide consultation directly to nursing staff, which may include psychoeducation. Because many older Veterans have co-morbid medical and social disabilities, a broad biopsychosocial approach to care is used in this setting.

Because of the dynamic nature of this rotation, psychological assessment and intervention techniques are often modified to accommodate the unique needs of our very complex patient population. Hence, traditional testing and therapy protocols are tailored for each patient as necessary to assist the interdisciplinary team with treatment planning. The recent COVID-19 pandemic has necessitated additional modifications to assessment and treatment of our CLC residents such that services are conducted via a telehealth modality in lieu of face-to-face/in-person meetings. Under COVID restrictions, supervision is also conducted via televideo platforms.

5. MENTAL HEALTH CLINIC

MHC is a large outpatient program averaging 25,000 patients visits per year. The MHC staff includes psychiatrists, nurses, social workers and psychologists, providing interns with the opportunity to work within an interdisciplinary outpatient setting. Veterans enrolled in MHC are treated for a wide variety of disorders. A large percentage of the MHC population presents with co-morbid substance use disorders, giving the intern the opportunity to gain experience in treating dually diagnosed patients. Outpatient settings provide the intern with the opportunity for training in a variety of psychological models. Both longer-term and brief psychotherapy are utilized in the treatment of individuals, groups, and couples. Interns will also have the opportunity to gain experience with veterans with serious mental illness through participation in the Social Skills Training group as well as having the option of seeing individual patients with a psychiatrist who specializes in serious mental illness. In addition to the variety of intervention opportunities, assessment also plays a crucial role in the MHC portion of this rotation. Interns will receive training in one or more of the following types of assessment while at MHC: diagnostic assessment, brief cognitive evaluations and personality testing.

In response to the COVID-19 epidemic, the Mental Health Clinic has expanded its use of telemental health technologies. Under COVID restrictions, all of our individual therapy sessions and intake interviews
take place either by telephone or VA Video Connect, and group sessions take place through the VANTS teleconferencing system or VA Video Connect.

<thead>
<tr>
<th>GOALS</th>
<th>REQUIREMENTS</th>
</tr>
</thead>
</table>
| **I. Research.** Integrate evidence-based research into clinical practice. | 1. Complete all assigned readings and integrate concepts in delivery of patient care.  
2. Actively engage in supervision discussion related to assigned readings. |
| **II. Ethical and Legal Standards.** Increase awareness and knowledge of ethical issues related to the practice of psychotherapy and assessment. | Actively participate in discussion of ethical issues in clinical supervision and treatment team meetings. |
| **III. Individual and Cultural Diversity.** Increase awareness and knowledge of individual and cultural diversity and stigma as they apply to the outpatient mental health population. | 1. Proactively engage in supervision discussions.  
2. Apply normative standards to test data appropriately and understand limitations.  
3. Attend didactics. |
| **IV. Professional Values, Attitudes, and Behaviors.** Demonstrate awareness of professional values, attitudes and behaviors. | 1. Maintain professional and respectful relationships with supervisors, patients, staff, and peers.  
2. Progress notes and assessments will be appropriately thorough and clearly written.  
3. Communication in supervision sessions and team meetings will be clear and professional. |
| **V. Communication and Interpersonal Skills.** Strengthen interpersonal skills and communication skills. | 1. Maintain professional and respectful relationships with supervisors, patients, staff, and peers.  
2. Progress notes and assessments will be appropriately thorough and clearly written.  
3. Communication in supervision sessions and team meetings will be clear and professional. |
| **VI. Assessment.** Strengthen general assessment skills. | 1. Conduct diagnostic intake interviews with patients who are new to MHC. |
VII. Intervention. Increase knowledge and skill in implementation of evidence-based individual and group interventions for a wide variety of disorders, including serious mental illness.

1. Provide individual cognitive behavioral therapy for treatment of a variety of disorders, which may include mood disorders, anxiety disorders, or PTSD.
2. Co-facilitate a social skills training group, with optional participation in other experiences with the SMI population.

VIII. Supervision. Demonstrate knowledge of supervision models and practices.

1. Provide direct supervision of a pre-intern on therapy case if the opportunity is available.
2. Actively participate in discussion of supervision models and practices during supervision sessions.

IX. Consultation and Interprofessional/Interdisciplinary Skills. Develop skills in interdisciplinary care coordination.

1. Attend multidisciplinary clinic meetings weekly.
2. Serve as a psychological consultant when requested by other team members.

MHC Supervisors
Donna Ames, M.D.
Sara J. Jarvis, Ph.D. (Primary Supervisor)

6. NEUROPSYCHOLOGY

The Neuropsychology Program, headquartered in the Neuropsychology Service, is affiliated with the Medical Center's Neurobehavioral Unit and the Neuropsychology Postdoctoral Training Programs at our VA as well as UCLA. Additional training in neuropsychological assessment can be obtained on a number of other rotations including Geriatric Medicine, Geropsychology and Rehabilitation Psychology. The program closely adheres to the recommendations of the Houston Conference on Specialty Education and Training in Clinical Neuropsychology. Interns who rotate through the Neuropsychology Assessment Laboratory and who also rotate through the above listed programs will devote approximately 50% time to neuropsychological training. Interns will be exposed to patients with a wide variety of neurological disorders including Alzheimer's disease, vascular dementia, traumatic brain injury, brain tumors (sometimes pre/post neurosurgery), deep brain stimulation (DBS) screenings, substance-induced cognitive disorders, toxic/metabolic encephalopathy, seizure disorder, major psychopathology and subcortical dementias such as Parkinson's disease and HIV-associated neurocognitive disorders. With regard to theoretical perspective, interns will be exposed primarily to a hypothesis testing/process approach to neuropsychological evaluation.

Clinical training is supported by a strong didactic base, including: 1. Neuropsychology Case Conferences offering basic theory designed to develop skills in clinical case interpretation; 2. Weekly neuroscience lectures at the VA and the UCLA Semel Institute that emphasize theoretical and conceptual issues; 3. Weekly Neurobehavior seminars presenting research and clinical data on neurobehavioral syndromes and cases highlighting unusual disorders; 4. Memory Disorder and Neurobehavioral Clinics in which case presentations are discussed by neurologists, neuropsychologists, and psychiatrists; and 5. Clinical pathology (i.e., brain cutting) conferences.
The training objectives for interns in the Neuropsychology Program are to broaden and deepen the intern’s knowledge of brain-behavior relationships, to develop skills in neuropsychological practice, especially with regards to data interpretation and diagnostic formulations, and to further awareness of the emotional consequences of neuropathology and of appropriate methods of psychological intervention. Also emphasized is the need to integrate current research and contributions from cognate disciplines (e.g., neurology, neuroimaging) in patient care.

By the close of the rotation interns will be adept at test administration and scoring of neuropsychological instruments. Supervision will largely focus on honing skills in interpretation, differential diagnosis, report preparation and patient feedback. Interns who complete the Neuropsychology rotation will be well prepared to pursue postdoctoral training and are given strong consideration for our neuropsychology-focused postdoctoral positions. Between our VA-based and UCLA-based postdoctoral training programs in neuropsychology, over the last 10-15 years an average of one to two interns have seamlessly transitioned to one of our postdoctoral positions.

If the COVID-19 pandemic is impacting care during the 2021-22 training year, interns will be trained in televideo neuropsychology science and practice. Assessments can be conducted via video teleconferencing platforms from home or remote locations. An emphasis will be placed on the clinical benefits and limitations of remote practice, ethical/legal issues that are of relevance, and how remote evaluations can both exacerbate and ameliorate health disparities secondary to racial, socioeconomic, life-stage, and geographical factors.

<table>
<thead>
<tr>
<th>GOALS</th>
<th>REQUIREMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>I. Research.</strong> Interns will gain knowledge of and apply clinical neuropsychology literature to assessment. Interns will improve their knowledge of brain-behavior relationships. Particular emphasis will be placed on functional neuroanatomy, integration of neuroimaging and neurological data, and normal and pathological neurocognitive and neuropsychiatric function.</td>
<td>1. Attend Neuropsychology Case Conferences. 2. Focused readings in neuropsychology. 3. Attend the weekly Neurobehavior Seminar. 4. Participate in the UCLA Neuropsychology Seminars when possible. 5. Attend Clinicopathologic Conferences (i.e. brain cuttings) when possible.</td>
</tr>
<tr>
<td><strong>II. Ethical and Legal Standards.</strong> Interns will demonstrate awareness of and skill in addressing ethical and legal dilemmas in neuropsychological assessment.</td>
<td>1. Case discussion during supervision, to include coverage of informed consent, confidentiality mandated reporting requirements, assessment of capacity, and other relevant topics. 2. Assigned readings</td>
</tr>
<tr>
<td><strong>III. Individual and Cultural Diversity.</strong> Interns will understand the impact of individual and cultural differences on neuropsychological test findings.</td>
<td>1. Increase knowledge through readings, supervision, and case discussion. 2. Integrate knowledge with clinical practice. 3. Attend didactic presentations.</td>
</tr>
<tr>
<td><strong>IV. Professional Values, Attitudes, and Behaviors.</strong> Interns will act in accordance with the values, attitudes, and behaviors of the profession and advocate for the welfare of others. For interns desiring a career in neuropsychology, to provide the training and experience needed to be competitive candidates for postdoctoral fellowship.</td>
<td>In addition to the clinical and didactic experiences enumerated above, interns anticipating a career in neuropsychology will also be expected to seek involvement in other professional activities such as research and attendance at scientific conferences.</td>
</tr>
<tr>
<td><strong>V. Communication and Interpersonal Skills.</strong> Interns will demonstrate the ability to forge</td>
<td>1. Conduct at least 12-15 comprehensive, observed neuropsychological interviews.</td>
</tr>
</tbody>
</table>
effective relationships with patients who are experiencing significant cognitive impairment, as well as others involved in the patient’s care. Interns will write neuropsychological reports at a level commensurate with a non-specialist psychologist.

2. Present at patient conferences.

VI. Assessment. Identify and diagnose basic neuropsychological disorders. Particular emphasis will be given to the more prevalent age-linked dementias such as Alzheimer’s disease and vascular dementia, as well as the neurocognitive disorders that are over-represented in the VA patient population (e.g., brain injury).

Administer and interpret at least 12-15 comprehensive neuropsychological test batteries. Additionally, briefer, focused inpatient evaluations will be conducted as warranted.

IX. Consultation and Interprofessional/Interdisciplinary Skills. Collaborate effectively as a neuropsychological consultant.

1. Provide written and verbal feedback to referral sources.
2. Provide feedback in peer supervision.

Neuropsychology Supervisor:
Charles H. Hinkin, Ph.D., ABPP-CN
Director, Neuropsychology Service

Additional Clinical Supervisors for Neuropsychological Assessment:
Steven Castellon, Ph.D.
Paul Cernin, Ph.D.
Megan Johnson, Ph.D.
Rebecca Melrose, Ph.D.
Anna Okonek, Ph.D.
Sheryl Osato, Ph.D.
Stacy Wilkins, Ph.D., ABPP/CN
Michelle Zeller, Psy.D, ABPP/CN

7. REHABILITATION PSYCHOLOGY

The primary goal of the Rehabilitation Psychology rotation is to provide interns with skills and experience in the interdisciplinary treatment of Veterans undergoing rehabilitation for disabling acute and chronic health conditions and traumatic injuries. Working within a biopsychosocial framework, the rehabilitation psychologist works closely with the interdisciplinary rehabilitation team to assist the Veteran in attaining their highest level of physical, psychological and social functioning. Interns on this rotation will have the opportunity to gain experience in consultation, assessment, and intervention across a variety of inpatient and outpatient medical settings.

1. Inpatient Acute Physical Rehabilitation Unit (Dr. Zeller): Interns are required to complete 1-2 consultations a week for patients admitted for intensive physical rehabilitation of stroke, amputation, traumatic brain injury, and neurological and orthopedic disorders. Consultation may include diagnostic evaluation, psychological and neuropsychological assessment, evaluation of decision-making capacity, short-term psychotherapy, and staff education and support. Interns also participate in weekly
interdisciplinary treatment rounds and family conferences. Under COVID-19 conditions, evaluations and support groups are conducted via telephone using the Veterans Affairs National Telecommunications System (VANTS). Supervision is conducted via secure video platforms such as VA Video Connect (VVC) or WebEx.

2. The Pain Clinic (Drs. Bailey and Kay): The Pain Clinic is a fast-paced medical setting in which the intern works closely with a psychologist on an interdisciplinary outpatient treatment team (Physical Medicine, Anesthesiology, Nursing, Pharmacy, Psychiatry, Physical Therapy and Occupational Therapy). Patients in the Pain Clinic present with chronic and complicated pain problems, along with co-morbid psychological conditions, such as anxiety, depression and substance use. Opportunities for training include: learning about ethical and professional considerations of a psychologist in an interprofessional setting; conducting psychodiagnostic and biopsychosocial evaluations on patients with primary pain complaints; consulting within an interprofessional team; providing brief, evidence-based individual psychotherapy including the possibility to learn the national VA evidence based psychotherapy (EBP) rollout of cognitive behavioral therapy for chronic pain (CBT-CP), and observing and/or co-facilitating an interprofessional, 10-week Comprehensive Pain Rehabilitation Program (CPRP); integrating science into practice by reviewing relevant literature and implementing evidence-based treatments; learning and applying knowledge of individual and cultural diversity that applies to Veterans with chronic pain. There may be opportunities for interns to conduct pre-surgical assessments with patients who are being considered for spinal cord stimulator or intrathecal drug pump implantation. A typical week for an intern in Pain Clinic involves 2-5 hours of training, including supervision. Most activities occur on Thursdays, though some experiences may be tailored to an individual intern’s schedule. When COVID-19 precautions are in effect, activities in Pain Clinic are adapted to telehealth modalities including telephone and VA Video Connect (VVC) assessment and interventions.

3. The Polytrauma/Traumatic Brain Injury (TBI) Program (Drs. Castellon and Okonek): The Polytrauma/TBI Program serves Veterans with multi-system injuries, including traumatic brain injury. While the majority of Veterans we see have served in Iraq and/or Afghanistan, we evaluate and treat patients from all military eras. Psychologists serve as part of a comprehensive rehabilitation team that includes Physical Medicine, Nursing, Social Work, Speech Pathology, Blind Rehabilitation, Occupational Therapy, Physical Therapy, Vocational Rehabilitation and Recreation Therapy. Interns conduct neuropsychological assessments and provide consultation to the treatment team. Trainees are expected to complete one or more comprehensive evaluations. When COVID-19 precautions are in place, assessment is conducted via tele-neuropsychology to the home via videoconferencing platforms or video to video.

4. Rehabilitation Support Groups (Dr. Zeller): Interns serve as group co-facilitators for Veterans with amputation and stroke. Trainees gain knowledge and experience in group process, transition to the community and provision of education and support.

**Amputation Support Group:** The purpose of this weekly group is to provide support and education to Veterans who have undergone or who are scheduled for amputation. Topics include risk factors for amputation, lifestyle change, coping with feelings, pain management, setting goals and discharge planning.

**Stroke Support Group:** This weekly group provides support and education to patients and families. Topics include warning signs of stroke, risk factors, prevention of stroke, coping with depression and caregiver issues.

**GOALS**

**REQUIREMENTS**

I. Research. Interns will gain knowledge of and apply the Rehabilitation Psychology clinical research literature to assessment consultation, and intervention.

1. Increase knowledge through focused readings in rehabilitation psychology.
2. Select and discuss at least one article in the areas of general rehabilitation, pain and traumatic brain injury as it applies to one’s cases and discuss in supervision.

II. Ethical and Legal Standards. Interns will demonstrate awareness of and skill in addressing ethical and legal dilemmas in the rehabilitation setting.

Case discussion during supervision, to include coverage of informed consent, mandated reporting requirements, assessment of capacity, confidentiality and other relevant topics in the context of telehealth.

III. Individual and Cultural Diversity. Address issues of individual and cultural diversity and physical disability in assessment, treatment, and consultation. Understand how diversity issues interplay with telehealth including issues related to access, mobile literacy, cognitive and physical disabilities, and cultural beliefs.

1. Increase knowledge through readings, supervision, and case discussion.
2. Gain greater understanding of social and environmental barriers for persons with disability though direct patient care, supervision and readings.
3. Integrate knowledge with clinical practice.
4. Attend didactic presentations.

IV. Professional Values, Attitudes, and Behaviors. Interns will act in accordance with the values, attitudes, and behaviors of the profession and advocate for the welfare of others.

1. Gain understanding of how to be an effective patient advocate through role modeling and participation in team meetings.
2. Engage in self-reflection in supervision to understand one’s own attitudes and biases.

V. Communication and Interpersonal Skills. Interns will demonstrate the ability to forge and maintain effective relationships with patients who are experiencing significant physical, cognitive and emotional losses. Interns will demonstrate skills necessary to communicate with staff from a variety of personal and professional backgrounds.

1. Serve as consultant on the interdisciplinary Inpatient Acute Rehabilitation and Pain teams.
2. Understand the importance of person-first language in medical and rehabilitation settings.
3. Participate in least one interdisciplinary team meeting for the Comprehensive Pain Rehabilitation Program.
### VI. Assessment
Evaluate psychological issues in patients with medical illness, to include selection and administrative of assessment tools appropriate to the patient’s illness and disease, for the purpose of developing treatment plans. Interns will practice assessment by telephone and VVC.

| 1. Complete 1-2 inpatient evaluations each week, including treatment planning, on the Acute Rehabilitation Unit. |
| 2. Perform a minimum of 2 comprehensive psychodiagnostic assessments or pre-surgical evaluations in the Pain Clinic. |
| 3. Complete 1-2 comprehensive evaluations in the Polytrauma/TBI Clinic. |
| 4. Provide feedback to the patient and treatment team. |

### VII. Intervention
Provide effective individual and group evidence-based treatments via telehealth modalities for patients with acute and chronic medical illnesses, taking into consideration psychological, cultural and social-environmental factors associated with health behaviors, illness and disease.

| 1. Provide behavioral skills training as a co-leader of CPRP. |
| 2. Provide brief behavioral interventions (2-4 sessions) for patients with chronic pain. |
| 3. Provide brief supportive interventions on the Acute Rehabilitation Unit. |

### VIII. Supervision
Demonstrate skills in supervision of a junior trainee and/or case consultation.

| 1. Supervise one pre-intern (if available) on one case. |
| 2. Attend Clinical Supervision seminar. |

### IX. Consultation and Interprofessional/Interdisciplinary Skills
Function effectively as a psychological consultant on an interdisciplinary medical team.

| 1. Provide consultation to interdisciplinary team members in all settings including telehealth. |
| 2. Participate in treatment team meetings and provide concise, informative feedback to team members from diverse discipline and levels of training. |
| 3. Offer perspectives and feedback regarding cases presented by other members of the team. |

8. SUBSTANCE USE DISORDER OUTPATIENT PROGRAMS

The Substance Use Disorder Outpatient Programs rotation offers a core training component in an intensive outpatient program using evidence-based treatments. As the Veterans served vary in terms of treatment needs and readiness for change, interns will have the opportunity to acquire assessment, intervention, and consultation skills to address the broad range of needs using a variety of models and different time frames ranging from brief, single session interventions to a full 16-week program with aftercare. When COVID-19 precautions are in place, all services are provided by video and telephone, with the exception of Contingency Management, which is put on temporary suspension to promote infection control.
The Intensive Outpatient Program (IOP) of the Addictive Behaviors Clinic (ABC) serves as the intern's home base during the rotation. This program serves Veterans with substance use disorders who are ready and able to engage in an intensive treatment program with the goal of abstinence, using a harm reduction approach that includes:

1. A highly structured, 3-day per week, 16-week outpatient Matrix model recovery program. This program offers supportive, psychoeducational, harm reduction treatment through individual and group counseling by professional staff. Early recovery and relapse prevention skills are emphasized.

2. A recovery maintenance program, consisting of one or more social support groups per week, encouraging patients to remain involved with ABC and their treatment team for as long as they choose.

Interns will have the opportunity to develop expertise using the early recovery and relapse prevention components of the Matrix model, a nationally recognized and widely used evidence-based treatment for substance use disorders developed at UCLA and our clinic. Interns will work with Veterans in all stages of their treatment, from intake through the maintenance phase of care. While the primary intervention modality is group therapy, interns will also provide individual therapy. Additional groups are also available for intern co-facilitation, including mindfulness in recovery, a harm reduction group (IMPROVE), and an aftercare group that supports sustained abstinence. Interns also provide individual short-term psychotherapy, perform intake assessments to refine diagnostic skills and on rare occasions conduct additional psychological testing such as cognitive screens or personality testing.

The ABC, in addition to the IOP program, also offers a Motivational Enhancement program for Veterans who are willing to explore the consequences of drugs and alcohol in their lives but are not willing to commit to abstinence based approaches. This program uses evidence-based motivational interviewing techniques to reduce the harm of continued use and shift from contemplation to the preparation stage and on to the action stage of change.

Additional training tracks may be available to interns while on the substance use disorder rotation based upon interest, including:

- **Opiate Treatment Program.** An opiate replacement program using methadone or suboxone to reduce recidivism for Veterans who struggle with opiate use disorder.

- **Contingency Management Program (CM).** This is an evidence-based treatment aimed at increasing program participation and reducing relapse rates through use of a random reward system. CM is being rolled out throughout the nation across VA’s and we are one of the initial sites to participate in implementing this program.

The intern becomes a valued member and psychology consultant on our vibrant interdisciplinary team that includes addiction psychiatry, nursing, social work, pharmacy and addiction therapy. Interns may also choose to become involved in ongoing program development and evaluation research activities.

<th>GOALS</th>
<th>REQUIREMENTS</th>
</tr>
</thead>
</table>
| **I. Research.** Interns will demonstrate proficiency in the ability to critically evaluate the clinical research literature, integrate the scientific literature into clinical practice, and demonstrate competency in clinical research as it pertains to substance use disorders. | 1. Attend the SUD interdisciplinary seminar.  
2. Focused readings in substance use disorders will be provided and discussed in supervision.  
3. Case review during supervision. |
| **II. Ethical and Legal Standards.** Interns will demonstrate ethical conduct and knowledge and application of professional ethics, laws and standards governing health service psychology in all professional activities related to substance use disorders. | 1. Case review during supervision, including identification of cases requiring department of child and family services reporting and Adult Protective Services reporting.  
2. Attend didactics on law and ethics throughout the year. |
| **III. Individual and Cultural Diversity.** Interns will understand and apply knowledge of individual and cultural diversity to psychological assessment, treatment, consultation, supervision, and clinical research, including how ethnicity, gender, gender and sexuality minority status, age, medical illness, and physical disability intersect with other aspects of diversity. | 1. Case review during supervision, interdisciplinary team meetings, and SUD seminar.  
2. Attend presentations on cultural diversity including the diversity seminar throughout the year. |
| **IV. Professional Values, Attitudes, and Behaviors.** Interns will conduct themselves in ways that reflect the values and attitudes of the profession, including integrity, deportment, professional identity, accountability, and concern for the welfare of others. | 1. Discussion of professionalism in supervision.  
2. Case review during supervision.  
3. Participation in interdisciplinary team discussions. |
| **V. Communication and Interpersonal Skills.** Interns are expected to maintain effective and respectful relationships with patients, peers, staff, supervisors, supervisees and professionals from other disciplines. | 1. Serve as a psychology consultant in interdisciplinary team meetings.  
2. Discussion of communication during supervision. |
| **VI. Assessment.** Interns will demonstrate knowledge and skills in evidence-based psychological assessment as it relates to substance use disorders and co-occurring conditions. | Conduct a minimum of 8 comprehensive initial intakes and present initial treatment plan recommendations to the interdisciplinary treatment team. |
VII. Intervention. Interns will demonstrate competency in providing evidence-based group and individual interventions for Veterans with substance use and co-occurring conditions.

1. Lead or co-lead two evidence-based Matrix psychoeducational groups.
2. Co-lead Mindfulness in Recovery group.
3. Co-lead Aftercare Group
4. Provide individual psychotherapy for at least 3 cases using CBT and/or MI approaches.

IX. Consultation and Interprofessional/Interdisciplinary Skills. Interns will demonstrate the ability to function effectively as a member of an interdisciplinary team.

1. Serve as a psychology consultant to the interdisciplinary team
2. Participate in interdisciplinary treatment team meetings for the Addictive Behaviors Clinic.

Substance Use Disorders Supervisors
Katherine Bailey, Ph.D.
Peter Graves, Ph.D.
Rubin Khoddam, Ph.D.
Paul Perales, Psy.D. (Primary Supervisor)

9. TRAUMA PROGRAMS

There are two outpatient mental health programs that provide trauma training experiences for interns: the Women’s Health Clinic (WHC) and the Trauma Recovery Service (TRS). Interns on this rotation will gain experience in both settings.

The Trauma Recovery Service (TRS): The Trauma Recovery Service clinic is an interdisciplinary clinic offering assessment and treatment of posttraumatic stress disorder. Veterans seen have a history of either combat, military sexual trauma, or other military related trauma. PTSD is one of the most common mental health diagnoses for Veterans at the WLA VA Medical Center. The TRS clinic is serving an increasing number of Veterans from Iraq and Afghanistan, but also includes Veterans from other theatres, including Vietnam. All Veterans seen in the clinic will receive a comprehensive psychodiagnostic intake to confirm a diagnosis of PTSD. Veterans are offered a variety of individual and group therapy services along with psychiatric management. There are opportunities to receive training in evidenced based psychotherapy for PTSD including individual Cognitive Processing Therapy and Prolonged Exposure Therapy. Additional services may include Cognitive Behavior Therapy for Insomnia (CBT-I), Skills Training in Affect and Interpersonal Regulation (STAIR), and Acceptance and Commitment Therapy. Under COVID-19 restrictions, the care in TRS occurs exclusively through phone or video conferencing platforms.

The Women’s Health Clinic (WHC): Women Veterans represent about 9% of the patients seen at the WLA VA and the Women’s Comprehensive Health Clinic is an integrated mental health and primary care program designed to address their medical and psychiatric needs. An increasing number are Iraq and Afghanistan War Veterans with combat-related PTSD. The majority of the women seen in the Women’s Clinic, regardless of their era of service, have trauma, whether it’s combat, military sexual trauma, childhood or other civilian trauma. Therefore, a large percentage present with PTSD, anxiety, panic and/or depression. Interns will co-lead three therapy groups.
with an emphasis on evidence-based treatments. Groups that have been offered in the past include:

- Sexual Trauma Group (CBT-informed)
- ACT for Depression/PTSD
- Using Anger More Positively
- CBT Anxiety/Depression Group
- Cognitive Processing Therapy (CPT) group for sexual trauma
- PTSD Recovery Group
- CPT group for combat trauma
- Mindfulness Skills
- Emotion Regulation

There will also be weekly initial interviews of new patients and time-limited individual therapy cases using either EBP protocols or CBT-informed treatment. The intern will also attend the WHC interdisciplinary care coordination meeting. When COVID-19 physical distancing rules are in effect, all patient contacts, including groups, are done by phone or video conferencing platforms.

Training Staff

Ames, Donna, M.D.
Medical School: Tufts University School of Medicine
Residency: UCLA/VA (Psychiatry)
Fellowship: NIMH extramural research fellowship in Schizophrenia
Academic Affiliation: Professor in Residence, UCLA Department of Psychiatry and Biobehavioral Sciences, David Geffen School of Medicine at UCLA
Rotation: Adjunct Supervisor, Ambulatory Care Mental Health/Psychosocial Rehabilitation and Recovery Center Program (PRRC); Research Preceptor
Clinical Interests: Helping Veterans utilizing the Recovery Model for the treatment of mental illness. Implementing evidenced based practices in a holistic, healing environment. Incorporating evidence-based social skills training, Cognitive Behavioral Therapy, and positive psychology with creative arts therapies, exercise, complementary modalities, nutritional, and pharmacologic therapy.
Research Interests: Holistic, bio-psycho-social-spiritual recovery oriented treatment of Veterans with severe mental illness, Spiritually Integrated Treatments for Moral Injury in Veterans with PTSD Symptoms
Active Research: Treatments for Moral Injury in U.S. Veterans with PTSD Symptoms; Measuring Effectiveness of Anger/Mood Management Class; Helping Los Angeles Faith-Communities Prevent Veteran Suicide During Periods of Transition Back into Civilian Life
Orientation: Holistic, Recovery Oriented Bio-psycho-social-spiritual

Amin, Anjuli R, Ph.D.
Doctoral Program: Southern Illinois University, Carbondale (Counseling), 2011
Doctoral Internship: Zablocki VA Medical Center, Milwaukee, WI, 2010-2011
Postdoctoral Fellowship: Special Fellowship in Primary Care and Health Psychology, Edward Hines Jr., VA Medical Center, Hines, IL, 2011-2012
Rotation: Co-Leader, Diversity Seminar
Clinical Interests: Multiculturalism; Aging; End-of-Life; Health Disparities; Health Psychology/Behavioral Medicine
Orientation: Humanist, Cognitive-Behavioral, Existential

Bailey, Katherine, Ph.D.
Doctoral Program: University of Illinois at Chicago (Clinical), 2010
Doctoral Internship: West Los Angeles VA Healthcare Center, 2009-2010
Postdoctoral Fellowship: San Francisco VA Medical Center, 2010-2011
Academic Affiliation: Health Sciences Clinical Instructor, David Geffen School of Medicine at UCLA
Rotations: Substance Use Disorder (SUD) Outpatient Programs; Rehabilitation Psychology (Pain Clinic)
Clinical Interests: Substance abuse treatment, chronic pain, health behavior change, coping with illness, anxiety disorders, evidence based behavioral practice
Research Interests: Chronic pain, SUD, health promotion and disease prevention, health disparities, smoking
Active Research: Living With Chronic Pain and Substance Use Disorder (Qualitative Study)
Certifications: CBT for Chronic Pain, Biofeedback, ACT-Depression, Mindfulness
Orientation: Cognitive Behavioral

Booker, Kevin E., Ph.D.
Doctoral Program: University of California, Santa Barbara (Clinical), 1999
Doctoral Internship: Howard University School of Medicine, 1998-1999
Postdoctoral Fellowship: UCLA School of Medicine, Department of Adult Psychiatry, 1999-2001
Academic Affiliation: Adjunct Faculty, Department of Cognitive Science
University of California, Irvine
Rotation: Geropsychology: Long-Term Care and Rehabilitation (Community Living Center)
Clinical Interests: PTSD over the lifespan; Exposure to violence and mood/anxiety disorders; Trauma-focused cognitive behavioral and experiential/humanistic treatments; The role of meaning in mitigating against co-morbid mood disturbance in patients with PTSD
Certifications: Prolonged Exposure, Cognitive Processing Therapy
Orientation: Cognitive Behavioral; Humanistic/Experiential

Boxer, Laurie, Ph.D.
Doctoral Program: Syracuse University (Clinical), 1991
Doctoral Internship: West Los Angeles VA Medical Center, 1990-1991
Rotation: Trauma Programs; Trauma Recovery Service (TRS)
Clinical Interests: Assessment and Treatment of PTSD, Dialectical Behavior Therapy, psychotherapeutic interventions for Bipolar Disorder
Certifications: Intensive training in DBT
Orientation: Cognitive Behavioral

Canarapen, Tara, Psy.D.
Doctoral Program: California School of Professional Psychology (Clinical), 2017
Doctoral Internship: Canandaigua VA Medical Center, 2016-2017
Postdoctoral Fellowship: Phoenix VA Healthcare Center (Trauma track), 2017-2018
Rotations: Year-Long Psychotherapy Placement Supervisor
Clinical Interests: Assessment and treatment of trauma related disorders, chronic nightmares, substance use disorders
Research Interests: Suicide prevention and SUD
Certifications: VA Cognitive Processing Therapy. VA Telemental Health provider
Orientation: Cognitive Behavioral

Castellon, Steven A., Ph.D., Director of Training, Postdoctoral Fellowship Program
Doctoral Program: University of California, Los Angeles (Clinical), 1997
Doctoral Internship: West Los Angeles VA Medical Center, 1995
Postdoctoral Fellowship: Neuropsychology, UCLA Neuropsychiatric Institute, 1997-1999
Academic Affiliation: Associate Clinical Professor
Department of Psychiatry and Biobehavioral Sciences, David Geffen School of Medicine at UCLA
Rotation: Rehabilitation Psychology (Polytrauma/TBI Clinic and Assessment Service)
Clinical Interests: Neuropsychological assessment, psychological assessment, traumatic brain injury
Research Interests: Cognitive effects of cancer treatments, neuropsychiatric aspects of infectious disease
Recent Research: Late effects of hormonal therapies in breast cancer survivors with and without chemotherapy exposure; Cognitive rehabilitation among breast cancer survivors with enduring cognitive complaints; Neurocognitive sequelae of hepatitis C and HIV co-infection
Orientation: Cognitive behavioral

Cernin, Paul, Ph.D.; Director of Training, Pre-Internship Program
Doctoral Program: Wayne State University (Clinical), 2008
Doctoral Internship: St. Louis VAMC, 2007-2008
Postdoctoral Fellowship: Geriatric Neuropsychology, UCLA Resnick Neuropsychiatric Institute, 2008-2010
Academic Affiliation: Assistant Clinical Professor, UCLA Department of Psychiatry and Biobehavioral Sciences, David Geffen School of Medicine at UCLA
Rotation: Geropsychology: Long-Term Care and Rehabilitation (Community Living Center); Psychotherapy placement supervisor
Clinical Interests: LGBT, behavior modification, geropsychology, neuropsychology, pain management, mindfulness meditation, evidence-based practice
Orientation: Cognitive Behavioral
Chen, Suzie, Ph.D.

Doctoral Program: Drexel University (Clinical), 2005
Doctoral Internship: VA Sepulveda Ambulatory Care Center & Nursing Home, 2003-2004
Postdoctoral Fellowship: VA Long Beach Healthcare System; Rehabilitation Psychology and Neuropsychology, 2006-2007
Academic Affiliation: Health Sciences Assistant Clinical Professor
Department of Psychiatry and Biobehavioral Sciences, David Geffen School of Medicine at UCLA
Rotation: Health Psychology (Primary Care-Mental Health Integration)
Clinical Interests: Behavioral medicine, integrated health care, stress management, biofeedback, disability, sexuality and intimacy
Certifications: Biofeedback
Orientation: Cognitive Behavioral, Integrative

Cook, Wesley, Psy.D.

Doctoral Program: Loma Linda University (Clinical with Forensic emphasis), 2012
Doctoral Internship: Philhaven Hospital, Mount Gretna, Pennsylvania, 2011-2012
Postdoctoral Fellowship: Kaiser Permanente Chemical Dependency Department/Atascadero State Hospital, 2012-2014
Academic Affiliation: California Polytechnic State University, San Luis Obispo, 2016-2018
Rotation: Domiciliary Residential Rehabilitation and Treatment Program (DRRTTP; SUD/Homeless Track)
Clinical Interests: Severe and persistent mental illness, substance use disorders, forensic psychology, violence risk assessment and management
Research Interests: Forensic psychology, schizophrenia, inpatient group therapy, Gestalt Therapy
Certifications: Master Addiction Counselor, Certified Alcohol and Drug Abuse Counselor
Orientation: Integrative with common factors emphasis

Graves, Peter K., Ph.D., J.D.

Doctoral Program: University of Illinois at Chicago (Clinical), 1994
Predoctoral Internship: VA Los Angeles Outpatient Clinic, 1991-1992
Academic Affiliation: California State University, Fresno, Adjunct Faculty
Rotation: Substance Use Disorder Outpatient Programs
Clinical Interests: Substance abuse, chronic mental illness, law and psychology
Orientation: Eclectic, Cognitive Behavioral, Interpersonal

Himmelfarb, Naomi, Ph.D.

Doctoral Program: University of Connecticut (Clinical), 1988
Predoctoral Internship: Los Angeles County-USC Medical Center, 1986-1987
Academic Affiliation: Assistant Clinical Professor, UCLA Department of Psychiatry and Biobehavioral Sciences, David Geffen School of Medicine at UCLA
Rotation: Trauma Programs (Women’s Health Clinic)
Clinical Interests: Military sexual assault, trauma, and PTSD
Certifications: Prolonged Exposure, Cognitive Processing Therapy
Orientation: Cognitive Behavioral and Psychodynamic

Hinkin, Charles H., Ph.D., ABPP

Doctoral Program: University of Arizona (Clinical), 1991
Doctoral Internship: Miami VA Medical Center, 1987-1988
Postdoctoral Fellowship: Neuropsychology, UCLA School of Medicine, 1991-1992
Academic Affiliation: Professor-in-Residence, Department of Psychiatry and Biobehavioral Sciences, David Geffen School of Medicine at UCLA
Rotation: Neuropsychology
Clinical Interests: Neuropsychological assessment, psychodiagnostic assessment, dementia
Research Interests: Neurocognitive and neuropsychiatric sequelae of HIV infection, HCV infection, substance abuse
Active Research: Neurocognitive and neuropsychiatric sequelae of HIV infection, HCV infection, substance abuse
Certifications: American Board of Professional Psychology; Clinical Neuropsychology (ABPP/CN)

Jarvis, Sara J., Ph.D.
Doctoral Program: Southern Illinois University (Clinical), 1987
Doctoral Internship: Camarillo State Hospital, 1986-1987
Rotation: Mental Health Clinic (MHC)
Clinical Interests: Personality and cognitive assessment, individual psychotherapy
Certifications: Cognitive Processing Therapy; CBT for Depression
Orientation: Cognitive Behavioral

Jetton, Christopher, Ph.D.
Doctoral Program: University of California, Los Angeles (Clinical), 2009
Doctoral Internship: West Los Angeles VA Medical Center, 2007-2008
Postdoctoral Fellowship: Serious Mental Illness, West Los Angeles VA Medical Center, 2009-2010
Rotation: Psychotherapy placement supervisor
Clinical Interests: Serious mental illness, homelessness, substance abuse
Research interests: Schizophrenia
Active Research: Social cognition in schizophrenia
Orientation: CBT

Johnson, Megan, Ph.D.
Doctoral Program: Fuller Theological Seminary (Clinical), 2017
Doctoral Internship: Los Angeles County Department of Mental Health – Twin Towers Correctional Facility
Postdoctoral Fellowship: GRECC Special Fellowship in Advanced Geriatrics, 2017-2019
Rotation: Geriatric Medicine
Clinical Interests: Trauma, posttraumatic growth, moral injury, serious mental illness, psychological assessment
Research interests: Neuropsychology, memory, TBI, Early Onset Alzheimer’s Disease, Frontotemporal Dementia, brain-behavior relationships, trauma, PTSD
Orientation: Psychodynamic

Kay, Morgan, Ph.D.
Doctoral Program: California School of Professional Psychology (Clinical), 2013
Doctoral Internship: Western New York VA, 2012-2013
Postdoctoral Fellowship: Interprofessional Integrative Health, West Los Angeles VA, 2013-2014
Rotation: Rehabilitation Psychology (Pain Clinic)
Clinical Interests: Health psychology, insomnia, chronic pain, health behavior change
Certifications: CBT for Insomnia, Mindfulness Facilitator, CBT for Chronic Pain (consultant)
Orientation: Cognitive Behavioral, Mindfulness-based treatment

Khoddam, Rubin., Ph.D.
Doctoral Program: University of Southern California (Clinical Science), 2018
Doctoral Internship: VA Greater Los Angeles Healthcare System, West Los Angeles, 2017-2018
Postdoctoral Fellowship: VA Greater Los Angeles Healthcare System, West Los Angeles (HPACT/Substance use Disorder Clinic), 2018-2019
Rotation: Domiciliary Residential Rehabilitation and Treatment Program (DRRTP) and Substance Use Disorder (SUD) Outpatient Programs
Clinical Interests: Substance use disorders and co-occurring psychopathology; PTSD, Motivational Enhancement for SUD, Alcohol and Drug Relapse Prevention
Research Interests: Examining mechanisms and factors contributing to the progression and cessation of substance use disorders and co-occurring disorders
Active Research: Improving the quality of care delivered through a novel harm reduction group entitled IMPROVE
Orientation: Integrative, Cognitive Behavioral
Kornfeind, Fred, Psy.D.
Doctoral Program: Illinois School of Professional Psychology – Chicago Campus (Clinical), 1996
Doctoral Internship: West Los Angeles VA Medical Center, 1995-1996
Postdoctoral Fellowship: Geropsychology, UCLA Neuropsychiatric Institute, 1996-1997
Rotation Elective: Home-Based Primary Care
Clinical Interests: Geropsychology, Health Psychology
Certifications: Behavioral interventions for challenging behaviors related to dementia (STAR program),
ACT, Motivational Interviewing
Orientation: Eclectic (Cognitive Behavioral, Client-Centered, Systems)

McGowan, Sarah Kate, Ph.D.
Doctoral Program: University of Illinois at Chicago (Clinical), 2014
Doctoral Internship: Boston Consortium in Clinical Psychology (VA Boston, Harvard Medical School,
Boston University Medical School; General Mental Health and National Center for PTSD Tracks),
2013-2014
Postdoctoral Fellowship: UCSD/SDVA Residency Program, Anxiety Disorders and Behavioral Sleep
Medicine Track, 2014-2015
Rotation: Health Psychology; Primary Care Behavioral Health Integration
Clinical Interests: Behavioral sleep medicine (CBT-I Consultant), treatment of anxiety and depressive
disorders
Research interests: Relationship between insomnia and anxiety; development and implementation of
behavioral treatments for insomnia
Active Research: 2 VA-funded grants (PI: Jennifer Martin) to develop and evaluate behavioral treatment
for insomnia and PAP adherence
Orientation: Behavioral and cognitive; ACT; Integrative

Melrose, Rebecca, Ph.D.
Doctoral Program: Boston University, Boston (Clinical), 2007
Doctoral Internship: West Los Angeles VA Medical Center, 2006-2007
Postdoctoral Fellowship: GRECC Special Fellowship in Advanced Geriatrics, West Los Angeles VA
Medical Center, 2007-2010
Academic Affiliation: Assistant Research Psychologist, Department of Psychiatry and Biobehavioral
Sciences, David Geffen School of Medicine at UCLA
Rotation: Geriatric Medicine
Clinical Interests: Neuropsychology
Research interests: Neuroimaging & neuropsychology of cognitive decline in aging
Active Research: Neuroimaging (task fMRI, resting state fMRI, DTI) of Mild Cognitive Impairment &
Alzheimer’s Disease
Orientation: Eclectic

Okonek, Anna, Ph.D., Director of Training
Doctoral Program: University of California, Los Angeles (Clinical), 1992
Doctoral Internship: West Los Angeles VA Medical Center, 1989-1990
Postdoctoral Fellowship: Geropsychology, UCLA Neuropsychiatric Institute, 1991-1993
Academic Affiliation: Clinical Professor, UCLA Department of Psychology
Rotation: Rehabilitation Psychology (Polytrauma/Traumatic Brain Injury); Leader, Clinical Supervision
Seminar
Clinical Interests: Polytrauma/traumatic brain injury, neuropsychology, adjustment to disability, coping
with acute and chronic medical illness
Orientation: Integrative
Osato, Sheryl, Ph.D.
Doctoral Program: University of Hawaii (Clinical), 1986
Doctoral Internship: West Los Angeles VA Medical Center, 1985-1986
Postdoctoral Fellowship: Geropsychology, UCLA Neuropsychiatric Institute
Academic Affiliations: Clinical Professor, Department of Psychiatry and Biobehavioral Sciences; David Geffen School of Medicine at UCLA
Associate Clinical Professor, UCLA Department of Psychology
Adjunct Professor, Fuller Graduate School of Psychology
Rotation: Geropsychology
Clinical Interests: Neuropsychiatric aspects of aging, dementia, psychopathology and aging
Research Interests: Aging and neuropsychology, dementia, chronic pain in older adults
Orientation: Cognitive Behavioral

Perales, Paul, Psy.D.
Doctoral Program: Pepperdine University (Clinical), 2017
Doctoral Internship: VA Sepulveda Ambulatory Care Center, 2016-2017
Postdoctoral Fellowship: Interprofessional Integrative Health, West Los Angeles VA, 2017-2018
Academic Affiliation: Adjunct Professor, Pepperdine University
Rotations: Substance Use Disorder (SUD) Outpatient Programs
Clinical Interests: Substance Abuse Treatment, Trauma, LGBTQ+ Mental Health, HIV Mental Health, Mindfulness/Integrative Health, Group Therapy
Orientation: Cognitive-Behavioral, Mindfulness-based interventions, Integrative

Robinson, Christina, Ph.D., ABPP
Doctoral Program: University of Houston (Clinical), 2011
Doctoral Internship: West Los Angeles VA Medical Center, 2010-2011
Postdoctoral Fellowship: Health Psychology/Integrative Care, West Los Angeles VA Medical Center, 2011-2012
Rotation: Trauma Programs; Trauma Recovery Service (TRS)
Clinical Interests: Trauma and co-occurring disorders, exposure therapy for anxiety disorders, medical/health psychology, psychological assessment
Certifications: Cognitive Processing Therapy
Orientation: Cognitive Behavioral, Eclectic

Song, Yong S., Ph.D.
Doctoral Program: Virginia Commonwealth University (Clinical), 1998
Doctoral Internship: San Francisco VA Medical Center, 1997-1998
Postdoctoral Fellowship: UCSF School of Medicine, Langley Porter Psychiatric Institute, 1998-2000
Academic Affiliation: Clinical Assistant Professor; UCLA Department of Psychology
Rotation: Substance Use Disorder Programs; Co-Leader, Diversity Seminar; Psychotherapy placement supervisor
Clinical Interests: Co-occurring PTSD and substance use disorders (SUD), motivational enhancement for SUD, OEF/OIF post-deployment care, health promotion among substance users, alcohol and drug relapse prevention
Certifications: Prolonged Exposure and Cognitive Processing Therapy
Orientation: Cognitive Behavioral, Interpersonal

Spezze, Jaquelyn, Psy.D.
Doctoral Program: Pepperdine University (Clinical Psychology), 2015
Doctoral Internship: VA Los Angeles Ambulatory Care Center
Postdoctoral Fellowship: Harbor-UCLA Medical Center, Behavioral Medicine/HIV Mental Health
Rotation: Domiciliary Residential Rehabilitation and Treatment Program
Clinical Interests: Substance use disorders, posttraumatic stress disorder, behavioral medicine/health psychology, HIV mental health, LGBTQ
Research Interests: Substance use disorders, HIV mental health, well-being in individuals with chronic medical conditions
Orientation: Cognitive Behavioral, Integrative

**Taylor-Ford, Megan, Ph.D.**

- **Clinical Interests:** Neuropsychological assessment, individual and group psychotherapy, geropsychology and stroke rehabilitation
- **Research Interests:** Neuropsychology of aging and TBI
- **Certifications:** American Board of Professional Psychology; Clinical Neuropsychology (ABPP/CN)
- **Orientation:** Cognitive Behavioral
West Los Angeles VA Clinical Postdoctoral Residency Program

The West Los Angeles VA Healthcare Center offers postdoctoral residency training in Clinical Psychology in five clinical emphasis areas, noted below. In addition, we offer three 2-year positions with specialty accreditation in Clinical Neuropsychology, all of which will be available in the 2022-23 training year. Clinical Psychology residency positions open for the 2022-23 training year include:

1. Health Psychology
2. Substance Use Disorders/Homeless Mental Health
3. Interprofessional Integrative Health (2 positions)
4. Trauma Psychology (possibly 2 positions)
5. Geropsychology (1-year position)

Clinical Neuropsychology (2-year) residency positions include:
1. General Neuropsychology
2. Geriatric Neuropsychology
3. Polytrauma/TBI/Rehab Neuropsychology

To be considered for any of our postdoctoral residency positions an applicant must:
1. Have completed all requirements for the doctoral degree, in Clinical or Counseling Psychology, including internship and dissertation.
   a. Department of Veterans Affairs requires that the applicant’s doctoral degree and internship be completed at programs accredited by the American Psychological Association or Canadian Psychological Association.
2. Be a US citizen. VA is unable to consider applications from anyone who is not currently a U.S. citizen. Verification of citizenship is required following selection and all of our incoming postdoctoral residents must complete a Certification of Citizenship in the United States prior to starting training.
3. Be aware that VA employment requires males born after December 31, 1959 must have registered for the draft by age 26. Male applicants sign a pre-appointment Certification Statement of Selective Service Registration before they can be processed into a training program.
4. Be aware that residents are subject to fingerprinting and background checks. Selection decisions are contingent on passing these screens.

Our postdoctoral program has been a member of the Association of Psychology Postdoctoral and Internship Centers (APPIC) since 2009. Both the Clinical Psychology and Clinical Neuropsychology residency programs have been accredited by the APA Commission on Accreditation though 2028. Our brochure can be found at the following web location: [https://www.losangeles.va.gov/trainee/](https://www.losangeles.va.gov/trainee/)

Local Information

The West Los Angeles VA Healthcare Center is located in one of the most vibrant and culturally diverse cities in the nation. We are located approximately one mile west of the UCLA campus and five miles east of the Santa Monica beaches. Neighboring communities include Brentwood, Westwood, and Santa Monica. Los Angeles has much to offer in the way of arts and culture (The Getty Center, the Los Angeles County Museum of Art, The Broad Museum, Museum of Contemporary Art, the Hammer Museum, the Los Angeles Philharmonic, the Hollywood Bowl, the Los Angeles Opera, to name a few), sports (Los Angeles Lakers, Kings, Sparks, Clippers, Dodgers, Angels, Galaxy, Rams and Chargers), restaurants, nightlife and entertainment (film, music, theater). The Southern California weather allows for year-round outdoor sports and recreation, including hiking, surfing, sailing and bicycling, as well as skiing and snowboarding in the winter and spring.
To find out more about events and attractions in the greater Los Angeles area, go to:
